Package 'OpenML'

September 21, 2019

Title Open Machine Learning and Open Data Platform

Version 1.10

RoxygenNote 6.1.1

Description We provide an R interface to 'OpenML.org' which is an online machine learning platform where researchers can access open data, download and upload data sets, share their machine learning tasks and experiments and organize them online to work and collaborate with other researchers.

The R interface allows to query for data sets with specific properties, and allows the downloading and uploading of data sets, tasks, flows and runs.

See https://www.openml.org/guide/api for more information.

Description

Allows you to do multiple chunked requests with the listOML* functions. The request will be repeated until total.limit is reached or until there are no more results available on the server.

Usage

```
chunkOMLlist(listfun, ..., total.limit = 1e+05, chunk.limit = 1000)
```

Arguments

listfun	[character(1)] the listing function for which you want to do chunked requests.
• • •	[ANY] arguments are passed to the function specified in listfun.
total.limit	[integer] the total limit of results that should be listed. Set this to a high number to get all available results from the server.
chunk.limit	[integer] the limit for a single request. If you reduce this number, the number of server requests will increase.

4 configuration

clearOMLCache

Clear cache directories

Description

Delete all cached objects and recreate cache directories.

Usage

```
clearOMLCache()
```

Examples

```
# \dontrun{
# clearOMLCache()
# }
```

configuration

OpenML configuration.

Description

After loading the package, it tries to find a configuration in your home directory. The R command path.expand("~/.openml/config") gives you the full path to the configuration file on your operating system.

For further information please read the vignette.

Note

By default the cache directory is located in a temporary directory and the cache will be deleted in between R sessions. We thus recommend to set the cache directory by hand.

See Also

Other config: getOMLConfig, loadOMLConfig, saveOMLConfig, setOMLConfig

convertMlrLearnerToOMLFlow

Converts an OMLFlow to an mlr learner.

Description

Creates an OMLFlow for an **mlr** Learner] Required if you want to upload an mlr learner to the OpenML server.

Usage

```
convertMlrLearnerToOMLFlow(lrn, name = paste0("mlr.", lrn$id),
  description = NULL, ...)
```

Arguments

lrn [Learner]

The mlr learner.

name [character(1)]

The name of the flow object. Default is the learner ID with the prefix "mlr"

prepended.

description [character(1)]

An optional description of the learner. Default is a short specification of the

learner and the associated package.

... [any

Further optional parameters that are passed to makeOMLFlow.

Value

OMLFlow .

convertMlrTaskToOMLDataSet

Converts a mlr task to an OpenML data set.

Description

Converts a Task to an OMLDataSet.

```
convertMlrTaskToOMLDataSet(task, description = NULL)
```

Arguments

task [Task]

A mlr task.

description [character(1)|OMLDataSetDescription]

Either an OMLDataSetDescription or a character(1) that describes the data. For the latter, all other relevant information is autogenerated from the Task.

Value

OMLDataSet .

See Also

Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertOMLDataSetToMlr, deleteOMLObject, getOMLDataSet, listOMLDataSets, tagOMLObject, uploadOMLDataSet

convertOMLDataSetToMlr

Convert an OpenML data set to mlr task.

Description

Converts an OMLDataSet to a Task.

Usage

```
convertOMLDataSetToMlr(obj, mlr.task.id = "<oml.data.name>",
  task.type = NULL, target = obj$desc$default.target.attribute,
  ignore.flagged.attributes = TRUE, drop.levels = TRUE,
  fix.colnames = TRUE, verbosity = NULL)
```

Arguments

obj [OMLDataSet]

The object that should be converted.

mlr.task.id [character(1)]

Id string for Task object. The strings <oml.data.name>, <oml.data.id> and <oml.data.version> will be replaced by their respective values contained in the OMLDataSet object. Default is <oml.data.name>.

task.type [character(1)]

As we only pass the data set, we need to define the task type manually. Possible are: "Supervised Classification", "Supervised Regression", "Survival Analysis". Default is NULL which means to guess it from the target column in the data set. If that is a factor or a logical, we choose classification. If it is numeric we choose regression. In all other cases an error is thrown.

convertOMLFlowToMlr 7

target [character]

 $The \ target for the \ classification/regression \ task. \ Default \ is \ the \ default. \ target. attribute$

of the OMLDataSetDescription.

ignore.flagged.attributes

[logical(1)]

Should those features that are listed in the data set description slot "ignore.attribute"

be removed? Default is TRUE.

drop.levels [logical(1)]

Should empty factor levels be dropped in the data? Default is TRUE.

fix.colnames [logical(1)]

Should colnames of the data be fixed using make.names? Default is TRUE.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

Task .

See Also

Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertMlrTaskToOMLDataSet, deleteOMLObject, getOMLDataSet, listOMLDataSets, tagOMLObject, uploadOMLDataSet

Examples

```
# \dontrun{
# library("mlr")
# autosOML = getOMLDataSet(data.id = 9)
# autosMlr = convertOMLDataSetToMlr(autosOML)
# }
```

convertOMLFlowToMlr

Converts a flow to a mlr learner.

Description

Converts an OMLFlow that was originally created with the OpenML R-package to a Learner.

```
convertOMLFlowToMlr(flow)
```

Arguments

flow [OMLFlow]

The flow object.

Value

Learner .

See Also

 $Other flow-related functions: \verb|deleteOMLObject|, getOMLFlow|, listOMLFlows|, makeOMLFlowParameter|, makeOMLFlow|, tagOMLObject|$

convertOMLMlrRunToBMR Convert OMLMlrRuns to a BenchmarkResult.

Description

Converts one or more OMLMlrRuns to a BenchmarkResult.

Usage

```
convertOMLMlrRunToBMR(...)
```

Arguments

... [OMLMlrRun]

One or more OMLMlrRuns

Value

BenchmarkResult .

See Also

Other run-related functions: convertOMLRunToBMR, deleteOMLObject, getOMLRun, listOMLRuns, makeOMLRunParameter, makeOMLRun, tagOMLObject, uploadOMLRun

convertOMLRunToBMR 9

convertOMLRunToBMR	Convert an OpenML run set to a benchmark result for mlr.
	· ·

Description

Converts an OMLRun to a BenchmarkResult.

Usage

```
convertOMLRunToBMR(run, measures = run$task.evaluation.measure,
  recompute = FALSE)
```

Arguments

run [OMLRun]

The run that should be converted.

measures [character]

Character describing the measures (see listOMLEvaluationMeasures) that will be converted into mlr measures and are then used in the BenchmarkResult. Currently, not all measures from OpenML can be converted into mlr measures.

recompute [logical(1)]

Should the measures be recomputed with mlr using the predictions? Currently

recomputing is not supported.

Value

BenchmarkResult .

See Also

 $Other \ run-related \ functions: \ convertOMLMlrRunToBMR, deleteOMLObject, getOMLRun, listOMLRuns, makeOMLRunParameter, makeOMLRun, tagOMLObject, uploadOMLRun$

convertOMLTaskToMlr Convert an OpenML task to mlr.

Description

Converts an OMLTask to a list of Task, ResampleInstance and Measure.

```
convertOMLTaskToMlr(obj, measures = NULL,
    mlr.task.id = "<oml.data.name>", ignore.flagged.attributes = TRUE,
    drop.levels = TRUE, verbosity = NULL)
```

10 convertOMLTaskToMlr

Arguments

obj [OMLTask]

The OML task object that should be converted.

measures [Measure]

Additional measures that should be computed.

mlr.task.id [character(1)]

Id string for Task object. The strings <oml.data.name>, <oml.data.id>, <oml.data.version>

and <oml.task.id> will be replaced by their respective values contained in the

OMLTask object. Default is <oml.data.name>.

ignore.flagged.attributes

[logical(1)]

Should those features that are listed in the data set description slot "ignore.attribute"

be removed? Default is TRUE.

drop.levels [logical(1)]

Should empty factor levels be dropped in the data? Default is TRUE.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

list A list with the following objects:

```
mlr.task [Task]
mlr.rin [ResampleInstance]
mlr.measures [list of Measures to optimize for.
```

See Also

 $Other \ task-related \ functions: \ delete OMLObject, get OMLTask, list OMLTask Types, list OMLTasks, make OMLTask, tag OMLObject$

```
# \dontrun{
# library("mlr")
# vinnieOML = getOMLTask(task.id = 4845)
# vinnieMlr = convertOMLTaskToMlr(vinnieOML)
# }
```

deleteOMLObject 11

deleteOMLObject	Delete an OpenML object.

Description

This will delete one of your uploaded datasets, tasks, flows or runs. Note that you can only delete the objects you uploaded.

Usage

```
deleteOMLObject(id, object = c("data", "task", "flow", "run", "study"),
  verbosity = NULL)
```

Arguments

id [integer(1)]

The ID of the respective object.

object [character(1)]

A character that specifies the object you want to delete from the server. Can be

either "data", "task", "flow" or "run".

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

See Also

Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertMlrTaskToOMLDataSet, convertOMLDataSetToMlr, getOMLDataSet, listOMLDataSets, tagOMLObject, uploadOMLDataSet

extractOMLStudyIds

Extract IDs of a OMLStudy object

Description

Extracts either all data.ids, task.ids, flow.ids or run.ids from an OMLStudy object.

Usage

```
extractOMLStudyIds(object, type, chunk.size = 400)
```

Arguments

object [OMLStudy]

The OMLStudy object.

type [character(1)]

A character that specifies which ids should be extracted from the study. Can be

either "data.id", "task.id", "flow.id" or "run.id".

chunk.size [integer(1)]

If the number of ids to be returned exceeds "chunk.size", a list of ids is returned. Each list element contains not more than "chunk.size" elements. Default is 400.

Value

numeric .

getCachedOMLDataSetStatus

Check status of cached datasets.

Description

The caching mechanism is fine, but sometimes you might want to work on a dataset, which is already cached and has been deactivated in the meanwhile. This function can be used to determine the status of all cached datasets.

Usage

```
getCachedOMLDataSetStatus(show.warnings = TRUE, ...)
```

Arguments

```
show.warnings [logical(1)]
```

Show warning if there are deactivated datasets in cache? Default is TRUE.

... Arguments passed to listOMLDataSets

getOMLConfig 13

Value

data.frame

Examples

```
# \dontrun{
# getCachedOMLDataSetStatus()
# }
```

 ${\tt getOMLConfig}$

Get OpenML configuration.

Description

Returns a list of OpenML configuration settings.

Usage

```
getOMLConfig()
```

Value

list of current configuration variables with class "OMLConfig".

See Also

Other config: configuration, loadOMLConfig, saveOMLConfig, setOMLConfig

Examples

```
getOMLConfig()
```

getOMLDataSet

Get an OpenML data set.

Description

Given a data set ID, the corresponding OMLDataSet will be downloaded (if not in cache) and returned.

Note that data splits and other task-related information are not included in an OMLDataSet. Tasks can be downloaded with getOMLTask.

```
getOMLDataSet(data.id = NULL, data.name = NULL, data.version = NULL,
  cache.only = FALSE, verbosity = NULL)
```

14 getOMLDataSet

Arguments

data.id [integer(1)] ID of the data set. data.name [character(1)] Data set name. This is an alternative to data.id. Default is NULL. data.version [integer(1)] Version number of the data set with name data.name. Default is NULL. Ignored if data.id is passed. cache.only [logical(1)] Only try to retrieve the object from cache. Will result in error if the object is not found. Default is FALSE. verbosity [integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output.

Value

OMLDataSet .

Note

One of data.id or data.name must be passed.

Default is set via setOMLConfig.

See Also

 $Other \ downloading \ functions: \ get OMLD at a Set Qualities, \ get OMLF low, \ get OMLRun, \ get OMLS tudy, \ get OMLT as k$

Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertMlrTaskToOMLDataSet, convertOMLDataSetToMlr, deleteOMLObject, listOMLDataSets, tagOMLObject, uploadOMLDataSet

```
# \dontrun{
# dat = getOMLDataSet(data.id = 9)
#
# # this object contains the data ($data)
# # and meta information
# str(dat, 1)
# summary(dat$data)
# }
```

```
getOMLDataSetQualities
```

List available OpenML qualities with values for given data set.

Description

The returned data. frame contains data set quality "name"s and values "value".

Usage

```
getOMLDataSetQualities(data.id, verbosity = NULL, name = NULL)
```

Arguments

```
data.id [integer(1)]
ID of the data set.

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
1: info output,
2: debug output.
Default is set via setOMLConfig.

name [character]
Returns only the data qualities from "name" (see also listOMLDataSetQualities).
```

Default is NULL and uses all available data qualities.

Value

data.frame .

See Also

 $Other downloading \ functions: \ get OMLD at a Set, \ get OMLFlow, \ get OMLRun, \ get OMLStudy, \ get OMLTask$

```
# \dontrun{
# a = getOMLDataSetQualities(data.id = 9)
# a[a$name == "number.of.missing.values", ]
# getOMLDataSetQualities(data.id = 9, name = "number.of.missing.values")
# }
```

16 getOMLFlow

get0	MI F	1 _{ow}
5000		TOW

Download an OpenML flow.

Description

Given an flow id, the corresponding OMLFlow is downloaded if not already available in cache.

Usage

```
getOMLFlow(flow.id, cache.only = FALSE, verbosity = NULL)
```

Arguments

flow.id [integer(1)]

ID of the implementation of an OpenML flow.

cache.only [logical(1)]

Only try to retrieve the object from cache. Will result in error if the object is not

found. Default is FALSE.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

OMLFlow .

See Also

# }
```

getOMLRun 17

|--|

Description

Given an run id, the corresponding OMLRun including all server and user computed metrics is downloaded if not already available in cache.

Usage

```
getOMLRun(run.id, cache.only = FALSE, only.xml = FALSE,
   verbosity = NULL)
```

Arguments

```
run.id
                  [integer(1)]
                  The run ID.
cache.only
                  [logical(1)]
                  Only try to retrieve the object from cache. Will result in error if the object is not
                  found. Default is FALSE.
only.xml
                  [logical(1)]
                  Should only the XML be downloaded?
verbosity
                  [integer(1)]
                  Print verbose output on console? Possible values are:
                  0: normal output,
                  1: info output,
                  2: debug output.
                  Default is set via setOMLConfig.
```

Value

OMLRun .

See Also

 $Other\ downloading\ functions:\ get OMLD at a Set Qualities,\ get OMLD at a Set,\ get OMLF low,\ get OMLStudy,\ get OMLT ask$

Other run-related functions: convertOMLM1rRunToBMR, convertOMLRunToBMR, deleteOMLObject, listOMLRuns, makeOMLRunParameter, makeOMLRun, tagOMLObject, uploadOMLRun

```
# \dontrun{
# runs_ctree = listOMLRuns(flow.id = 2569)
# run1 = getOMLRun(run.id = runs_ctree$run.id[1])
# str(run1, 1)
# }
```

18 getOMLSeedParList

getOMLRunParList

Extract OMLRunParList from run

Description

Extracts the seed information as OMLRunParList from a OMLRun.

Usage

```
getOMLRunParList(run)
```

Arguments

run [OMLRun]

 $A \; \mathsf{OMLRun}$

Value

OMLRunParList .

getOMLSeedParList

Extract OMLSeedParList from run

Description

Extracts the seed information as OMLSeedParList from a OMLRun.

Usage

```
getOMLSeedParList(run)
```

Arguments

run [OMLRun]

A OMLRun

Value

OMLSeedParList .

getOMLStudy 19

Description

A OpenML study is a collection of OpenML objects with a specific tag defined by the user (i.e. "study_X"). If you create a study through the website https://www.openml.org/new/study, you can also specify an alias which can be used to access the study.

Usage

```
getOMLStudy(study = NULL, verbosity = NULL)
```

Arguments

study [numeric(1)|character(1)]

Either the id or the alias of a study.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

OMLStudy .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

See Also

 $Other\ downloading\ functions:\ get OMLD at a Set Qualities,\ get OMLD at a Set,\ get OMLF low,\ get OMLRun,\ get OMLT ask$

20 getOMLTask

getOMLTask Get an OpenML task.		
	getOMLTask	Get an OpenML task.

Description

Given a task ID, the corresponding OMLTask will be downloaded (if not in cache) and returned.

Usage

```
getOMLTask(task.id, cache.only = FALSE, verbosity = NULL)
```

Arguments

```
task.id [integer(1)]
Task ID.

cache.only [logical(1)]
Only try to retrieve the object from cache. Will result in error if the object is not found. Default is FALSE.

verbosity [integer(1)]
Print verbose output on console? Possible values are:
0: normal output,
```

1: info output,
2: debug output.

Default is set via setOMLConfig.

Value

OMLTask .

See Also

 $Other\ downloading\ functions:\ get OMLD at a Set Qualities,\ get OMLD at a Set,\ get OMLF low,\ get OMLR un,\ get OMLS tudy$

 $Other \ task-related \ functions: \ convertOMLTaskToMlr, \ delete OMLObject, list OMLTaskTypes, list OMLTasks, \\ make OMLTask, \ tag OMLObject$

```
# # Download task and access relevant information to start running experiments
# \dontrun{
# task = getOMLTask(1)
# task
# task$task.type
# task$input$data.set
# head(task$input$data.set$data)
# }
```

listOMLDataSetQualities

List available OpenML qualities names.

Description

The returned data. frame contains quality name "name".

Usage

```
listOMLDataSetQualities(verbosity = NULL)
```

Arguments

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

# }
```

22 listOMLDataSets

listOMLDataSets

List the first 5000 OpenML data sets.

Description

The returned data.frame contains the data set id "data.id", the "status" ("active", "deactivated", "in_preparation") and describing data qualities. Note that by default only the first 5000 data sets will be returned (due to the argument "limit = 5000").

Usage

```
listOMLDataSets(number.of.instances = NULL, number.of.features = NULL,
number.of.classes = NULL, number.of.missing.values = NULL,
tag = NULL, data.name = NULL, limit = 5000, offset = NULL,
status = "active", verbosity = NULL)
```

Arguments

number.of.instances

[numeric(1) | numeric(2)]

If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

number.of.features

[numeric(1) | numeric(2)]

If not NULL, it subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given range.

number.of.classes

[numeric(1) | numeric(2)]

If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

number.of.missing.values

[numeric(1) | numeric(2)]

If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

tag [character]

If not NULL only entries with the corresponding tags are listed.

data.name [character(1)]

Name of the data set.

limit [numeric(1)]

Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.

offset [numeric(1)]

Optional. The offset to start from. Should be indices starting from 0, which do

not refer to IDs. Is ignored when no limit is given.

status [character]

Subsets the results according to the status. Possible values are {"active", "deactivated", "in_prepara

Default is "active".

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

Other data set-related functions: OMLDataSetDescription, OMLDataSet, convertMlrTaskToOMLDataSet, convertOMLDataSetToMlr, deleteOMLObject, getOMLDataSet, tagOMLObject, uploadOMLDataSet

Examples

```
# \dontrun{
# datasets = listOMLDataSets()
# tail(datasets)
# }
```

listOMLEstimationProcedures

List available estimation procedures.

Description

The returned data.frame contains the est.id and the corresponding name of the estimation procedure.

Usage

listOMLEstimationProcedures(verbosity = NULL)

Arguments

```
verbosity [integer(1)]
```

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

# \dontrun{
# listOMLEstimationProcedures()
# }
```

listOMLEvaluationMeasures

List available OpenML evaluation measures.

Description

The names of all evaluation measures which are used in at least one run are returned in a data. frame.

```
listOMLEvaluationMeasures(verbosity = NULL)
```

listOMLFlows 25

Arguments

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

Examples

```
# \dontrun{
# listOMLEvaluationMeasures()
# }
```

 ${\tt listOMLFlows}$

List all registered OpenML flows.

Description

The returned data. frame contains the flow id "fid", the flow name ("full.name" and "name"), version information ("version" and "external.version") and the uploader ("uploader") of all registered OpenML flows.

```
listOMLFlows(tag = NULL, limit = NULL, offset = NULL,
  verbosity = NULL)
```

26 listOMLFlows

Arguments

tag [character]

If not NULL only entries with the corresponding tags are listed.

limit [numeric(1)]

Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available en-

tries.

offset [numeric(1)]

Optional. The offset to start from. Should be indices starting from 0, which do

not refer to IDs. Is ignored when no limit is given.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

Other flow-related functions: convertOMLFlowToMlr, deleteOMLObject, getOMLFlow, makeOMLFlowParameter, makeOMLFlow, tagOMLObject

```
# \dontrun{
# flows = listOMLFlows()
# tail(flows)
# }
```

listOMLRunEvaluations 27

listOMLRunEvaluations List run results of a task.

Description

Retrieves all run results for task(s) (task.id), flow(s) (flow.id) run(s) (run.id) or uploaders(s) (uploader.id and returns a data.frame. Each row contains, among others, the run id "rid". Alternatively the function can be passed a single tag to list only runs with the corresponding tag associated.

Usage

```
listOMLRunEvaluations(task.id = NULL, flow.id = NULL, run.id = NULL,
uploader.id = NULL, tag = NULL, limit = NULL, offset = NULL,
verbosity = NULL, evaluation.measure = NULL,
show.array.measures = FALSE, extend.flow.name = TRUE)
```

Arguments

task.id [integer] a single ID or a vector of IDs of the task(s). flow.id [integer] a single ID or a vector of IDs of the flow(s). run.id [integer] a single ID or a vector of IDs of the run(s). uploader.id a single ID or a vector of IDs of uploader profile(s). tag [character] If not NULL only entries with the corresponding tags are listed. limit [numeric(1)] Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries. offset [numeric(1)] Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given. verbosity [integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output.

Default is set via setOMLConfig.

28 listOMLRuns

```
evaluation.measure
```

```
[character(1)]
```

Use this to speedup your request. It restricts the results to only one evaluation measure (see listOMLEvaluationMeasures for possible values). Default is NULL, which means that no restriction is going to happen and all possible evaluation measures will be returned.

show.array.measures

```
[logical(1)]
```

Should measures that return an array instead of a single skalar value be shown (e.g. confusion matrix, predictive accuracy within each class)? Default is FALSE.

extend.flow.name

```
[logical(1)]
```

Adds a column flow.version that refers to the version number of the flow and a column flow.source containing the prefix of the flow that specifies the source of the flow (i.e. weka, R) and a column learner.name that refers to the learner. Default is TRUE.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

Examples

```
# \dontrun{
# # get run results of task 6 (as many rows as runs for this task)
# rev_tid6 = listOMLRunEvaluations(task.id = 6L)
# str(rev_tid6)
#
# get run results of run 8 (one row)
# rev_rid8 = listOMLRunEvaluations(run.id = 8)
# str(rev_rid8)
# }
```

listOMLRuns

List the first 5000 OpenML runs.

Description

This function returns information on all OpenML runs that match certain task.id(s), run.id(s), flow ID flow.id and/or uploader.id(s). Alternatively the function can be passed a single tag to list only runs with the corresponding tag associated. Note that by default only the first 5000 runs will be returned (due to the argument "limit = 5000").

listOMLRuns 29

Usage

```
listOMLRuns(task.id = NULL, flow.id = NULL, run.id = NULL,
uploader.id = NULL, tag = NULL, limit = 5000, offset = NULL,
verbosity = NULL)
```

Arguments

task.id [integer]

a single ID or a vector of IDs of the task(s).

flow.id [integer]

a single ID or a vector of IDs of the flow(s).

run.id [integer]

a single ID or a vector of IDs of the run(s).

uploader.id [integer]

a single ID or a vector of IDs of uploader profile(s).

tag [character]

If not NULL only entries with the corresponding tags are listed.

limit [numeric(1)]

Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available en-

tries.

offset [numeric(1)]

Optional. The offset to start from. Should be indices starting from 0, which do

not refer to IDs. Is ignored when no limit is given.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

30 listOMLSetup

Other run-related functions: convertOMLM1rRunToBMR, convertOMLRunToBMR, deleteOMLObject, getOMLRun, makeOMLRunParameter, makeOMLRun, tagOMLObject, uploadOMLRun

Examples

```
# \dontrun{
# runs_ctree = listOMLRuns(flow.id = 2569)
# head(runs_ctree)
# }
```

listOMLSetup

List hyperparameter settings

Description

Each run has a setup.id, i.e. an ID for the hyperparameter settings of the flow that produced the run. This function allows the listing of hyperparameter settings.

Usage

```
listOMLSetup(setup.id = NULL, flow.id = NULL, limit = 1000,
  offset = NULL, verbosity = NULL)
```

Arguments

setup.id [integer(1)] ID of the setup (which is basically an ID for the parameter configuration). flow.id [integer(1)] ID of the implementation of an OpenML flow. limit [numeric(1)] Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available enoffset [numeric(1)] Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given. [integer(1)] verbosity Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via setOMLConfig.

Value

data.frame .

listOMLStudies 31

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

Other listing functions: chunkOMLlist, listOMLDataSetQualities, listOMLDataSets, listOMLEstimationProcedures, listOMLEvaluationMeasures, listOMLFlows, listOMLRuns, listOMLStudies, listOMLTaskTypes, listOMLTaskS

Examples

```
# \dontrun{
# listOMLSetup(limit = 1)
# }
```

listOMLStudies

list OpenML Studies.

Description

Retrives a list of available studies.

Usage

```
listOMLStudies(main.entity.type = NULL, status = "all",
    uploader.id = NULL, limit = NULL, offset = NULL,
    verbosity = NULL)
```

Arguments

uploader.id

[integer]

```
[character]
Whether a collection of runs (study) or collection of tasks (benchmark suite)
should be returned. Subsets the results according to the entity type. Possible
values are {NULL, "task", "run"}. Default is NULL which means that no subsetting is done.

status
[character]
Subsets the results according to the status. Possible values are {"active", "deactivated", "in_prepara
Default is "active".
```

a single ID or a vector of IDs of uploader profile(s).

32 listOMLTasks

limit [numeric(1)]

Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available en-

tries.

offset [numeric(1)]

Optional. The offset to start from. Should be indices starting from 0, which do

not refer to IDs. Is ignored when no limit is given.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

Other listing functions: chunkOMLlist, listOMLDataSetQualities, listOMLDataSets, listOMLEstimationProcedures, listOMLEvaluationMeasures, listOMLFlows, listOMLRuns, listOMLSetup, listOMLTaskTypes, listOMLTasks

listOMLTasks

List the first 5000 OpenML tasks.

Description

The returned data.frame contains the task_id, the data set id data.id, the status and some describing data qualities. Note that by default only the first 5000 data sets will be returned (due to the argument "limit = 5000").

```
listOMLTasks(task.type = NULL, estimation.procedure = NULL,
    evaluation.measures = NULL, number.of.instances = NULL,
    number.of.features = NULL, number.of.classes = NULL,
    number.of.missing.values = NULL, tag = NULL, data.name = NULL,
    data.tag = NULL, limit = 5000, offset = NULL, status = "active",
    verbosity = NULL)
```

listOMLTasks 33

Arguments

task.type [character(1)]

If not NULL, only tasks belonging to the given task type are listed. Use listOMLTaskTypes()\$name to see possible values for task.type. The default is NULL, which means that

tasks with all available task types are listed.

estimation.procedure

[character]

If not NULL, only tasks belonging the given estimation procedures are listed. Use

listOMLEstimationProcedures() \$ name to see possible values for estimation.procedure.

The default is NULL, which means that tasks with all available estimation procedures are listed.

evaluation.measures

[character]

If not NULL, only tasks belonging the given evaluation measures are listed. Use

listOMLEvaluationMeasures() \$name to see possible values for evaluation.measures.

The default is NULL, which means that tasks with all available evaluation measures are listed.

number.of.instances

[numeric(1) | numeric(2)]

If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

number.of.features

[numeric(1) | numeric(2)]

If not NULL, it subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given range.

number.of.classes

[numeric(1) | numeric(2)]

If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

number.of.missing.values

[numeric(1) | numeric(2)]

If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

tag [character]

If not NULL only entries with the corresponding tags are listed.

data.name [character(1)]

Name of the data set.

data.tag [character(1)]

Refers to the tag of the dataset the task is based on. If not NULL only tasks with

the corresponding data. tag are listed.

limit [numeric(1)]

Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available en-

tries.

offset [numeric(1)]

Optional. The offset to start from. Should be indices starting from 0, which do

not refer to IDs. Is ignored when no limit is given.

34 listOMLTaskTypes

status [character]

Subsets the results according to the status. Possible values are {"active", "deactivated", "in_prepara

Default is "active".

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling forget on the function manually.

# head(tasks)
# }
```

listOMLTaskTypes

List available OpenML task types.

Description

The returned data.frame contains the type id and the character name of the OpenML task type.

```
listOMLTaskTypes(verbosity = NULL)
```

loadOMLConfig 35

Arguments

```
verbosity [integer(1)]
```

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

data.frame .

Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. ```

loadOMLConfig

Load OpenML configuration.

Description

Loads the OpenML config file from the disk and overwrites the current OpenML config. If there is no API key in the configuration file, the key is retrieved from the environment variable "OPENM-LAPIKEY" (if defined).

```
loadOMLConfig(path = "~/.openml/config", assign = TRUE)
```

36 makeOMLFlow

Arguments

path [character(1)]

Full path location of the config file to be loaded.

assign [logical(1)]

Use the loaded configuration as the current configuration? If set to FALSE, the

configuration is just returned by the function. Default is TRUE.

Value

list of current configuration variables with class "OMLConfig".

See Also

Other config: configuration, getOMLConfig, saveOMLConfig, setOMLConfig

Examples

```
# # if assign = FALSE nothing is changed
# # usually one would want assign = TRUE
# \dontrun{
# loadOMLConfig(assign = FALSE)
# }
```

makeOMLFlow

Construct OMLFlow.

Description

More details about the elements of a OMLFlow can be found in the XSD scheme.

```
makeOMLFlow(flow.id = NA_integer_, uploader = NA_integer_, name,
  version = NA_character_, external.version = NA_character_,
  description, creator = NA_character_, contributor = NA_character_,

  binary.format = NA_character_, source.md5 = NA_character_,
  binary.md5 = NA_character_, source.path = NA_character_,
  binary.path = NA_character_, object = NULL)
```

makeOMLFlow 37

Arguments

flow.id [integer(1)]

ID of the flow. Generated by the server, based on name and version of the flow.

Ignored when uploaded manually.

uploader [integer(1)]

The user that uploaded the flow. Added by the server. Ignored when uploaded

manually.

name [character(1)]

The name of the flow. Name-version combinations should be unique.

Allowed characters: () [] a-z A-Z 0-9 . _ - +

version [character(1)]

The version of the flow. Default is 1.0. Ignored at upload time.

external.version

[character(1)]

An external version, defined by the user. In combination with the name, it must

be unique.

description [character(1)]

A user description of the flow.

creator [character]

Optional. The persons/institutions that created the flow.

contributor [character]

Optional. (Minor) contributors to the workflow

upload.date [character(1)]

The date on which the flow was uploaded.

Format YYYY-mm-ddThh:MM:SS. Added by the server. Ignored when up-

loaded manually.

licence [character(1)]

Optional. Default is none, meaning Public Domain or "don't know/care".

language [character(1)]

Optional. Starts with one upper case letter, rest is lower case. Default is English.

full.description

[character(1)]

Optional. Full description of the workflow, e.g, man pages filled in by tool. This is a much more elaborate description than given in the 'description field'. It may

include information about all components of the workflow.

installation.notes

[character(1)]

Optional. Additional hints on how to run the flow.

dependencies [character(1)]

Optional. The dependencies of the flow.

bibliographical.reference

[list]

An optional list containing information on bibliographical references in form of

OMLBibRef.

38 makeOMLFlow

implements [character(1)]

Ontological reference.

parameters [list]

The parameters of the flow. A list containing OMLFlowParameters.

components [list]

A list containing OMLFlows. Typically components of a workflow or subfunctions of an algorithm (e.g. kernels). Components can have their own parameters.

qualities [list]

Qualities of the algorithm. Each member of the list is an OMLFlowQuality.

tags [character]

Tags describing the algorithm.

source.url [character(1)]

URL from which the source code can be downloaded. Added by the server.

Ignored when uploaded manually.

binary.url [character(1)]

URL from which the binary can be downloaded. Added by the server. Ignored

when uploaded manually.

source.format [character(1)]

Format of the source file.

binary.format [character(1)]

Format of the binary file.

source.md5 [character(1)]

MD5 checksum to check if the source code was uploaded correctly.

binary.md5 [character(1)]

MD5 checksum to check if the binary code was uploaded correctly.

source.path [character(1)]

The path to the cached source file, once getOMLFlow was run.

binary.path [character(1)]

The path to the cached binary file, once getOMLFlow was run.

object [any]

(optional) Any R object referring to the flow.

See Also

Other flow-related functions: convertOMLFlowToMlr, deleteOMLObject, getOMLFlow, listOMLFlows, makeOMLFlowParameter, tagOMLObject

makeOMLRun 39

makeOMLRun Construct OMLRun.

Description

More details about the elements of a OMLRun can be found in the XSD scheme.

Usage

```
makeOMLRun(run.id = NA_integer_, uploader = NA_integer_,
    uploader.name = NA_character_, task.id, task.type = NA_character_,
    task.evaluation.measure = NA_character_, flow.id = NA_integer_,
    flow.name = NA_character_, setup.id = NA_integer_,
    setup.string = NA_character_, error.message = NA_character_,
    parameter.setting = list(), tags = NA_character_,
    predictions = NULL, input.data = makeOMLIOData(),
    output.data = makeOMLIOData())
```

Arguments

run.id [numeric(1)] ID of the run. Added by server. Ignored when uploading a run. uploader ID of the user that uploaded the run. Added by server. Ignored when uploading uploader.name [character(1)] Name of the user that uploaded the run. Ignored when uploading a run. task.id [numeric(1)] ID of the task that is solved in this run. This ID is given in the task description. task.type [character(1)] Task type of the run. See listOMLTaskTypes for all possible types. task.evaluation.measure [character(1)] Evaluation measure used in the run. flow.id [character(1)] ID of the flow used to solve the task. Returned by the API when you upload the flow, or given in the flow description when you download an existing flow. flow.name [character(1)] Name of the flow. setup.id [numeric(1)] Unique ID of the used setup. Ignored when uploading a run (i.e., it will be searched based on the parameter settings). setup.string [character(1)]

This argument is optional.

The CLI string that can invoke the learner with the correct parameter settings.

40 makeOMLRunParList

error.message [character(1)]

Whenever an error occurs during the run, this can be reported here.

parameter.setting

[list]

A list of OMLRunParameters containing information on the parameter settings.

tags [character]

Optional tags describing the run.

predictions [data.frame]

The predictions of the run.

input.data [OMLIOData]

All data that served as input for the run. Added by server. Ignored when upload-

ing.

output.data [OMLIOData]

All data that was the output of this run, i.e., predictions, evaluation scores. Most of this will be added by the server, but users can also provide evaluation scores

for their own evaluation measures.

See Also

Other run-related functions: convertOMLM1rRunToBMR, convertOMLRunToBMR, deleteOMLObject, getOMLRun, listOMLRuns, makeOMLRunParameter, tagOMLObject, uploadOMLRun

makeOMLRunParList

Construct OMLRunParList.

Description

Generate a list of OpenML run parameter settings for a given mlr learner.

Usage

```
makeOMLRunParList(mlr.lrn, component = NA_character_)
```

Arguments

mlr.lrn [Learner]

The mlr learner.

component [character]

If the learner is a (sub-)component of a flow, this component's name.

Value

A OMLRunParList which is a list of OMLRunParameters.

makeOMLSeedParList 41

makaOMI	SeedParl	ict
makeum	Seedran	TS U

Construct OMLSeedParList

Description

Generate a list of OpenML seed parameter settings for a given seed.

Usage

```
makeOMLSeedParList(seed, prefix = "openml")
```

Arguments

seed [numeric(1)]

The seed.

prefix [character]

prefix for seed parameter names.

Value

A OMLSeedParList which is a list of OMLRunParameters that provide only information about the seed.

 ${\sf makeOMLStudy}$

OMLStudy.

Description

If you create a study through the website https://www.openml.org/new/study, you can also specify an alias which can be used to access the study. To see a full list of all elements, please see the XSD.

Usage

```
makeOMLStudy(alias, name, description, data.id = NULL, task.id = NULL,
flow.id = NULL, run.id = NULL)
```

Arguments

alias [character]

The alias of the study.

name [character]

The name of the study.

description [character]

The description of the study.

42 makeOMLTask

data.id	[integer] A vector of IDs of the data sets to be included in the study.
task.id	[integer]A vector of IDs of the tasks to be included in the study.
flow.id	[integer]A vector of IDs of the flows to be included in the study.
run.id	[integer] A vector of IDs of the runs to be included in the study.

Value

OMLStudy .

See Also

 $Other \, upload OML {\tt Pload OMLP low, upload OMLR un, upload OMLS tudy}$

Description

More details about the elements of a OMLTask can be found in the XSD scheme.

Usage

```
makeOMLTask(task.id, task.type, input, parameters = list(), output,
  tags = NA_character_)
```

Arguments

task.id [integer(1)]

The ID of this task. Generated by the API.

task.type [character(1)]

The task type of this task. Task types can be browsed and created on the OpenML website. See also listOMLTaskTypes for a list of all available tasks.

input [list]

The inputs given for this task (i.e. data.set, estimation.procedure, evaluation.measures,

cost.matrix).

parameters [list]

Parameter settings for this task (depends on the task type).

output [list]

Outputs expected after running this task.

tags [character]

Optional tags describing the (data of the) task.

OMLDataSet 43

See Also

Other task-related functions: convertOMLTaskToMlr, deleteOMLObject, getOMLTask, listOMLTaskTypes, listOMLTasks, tagOMLObject

OMLDataSet OMLDataSet.

Description

An OMLDataSet consists of an OMLDataSetDescription, a data.frame containing the data set, the old and new column names and, finally, the target features.

The OMLDataSetDescription provides information on the data set, like the ID, name, version, etc. To see a full list of all elements, please see the XSD.

The slot colnames old contains the original names, i.e., the column names that were uploaded to the server, while colnames new contains the names that you will see when working with the data in R. Most of the time, old and new column names are identical. Only if the original names are not valid, the new ones will differ.

The slot target.features contains the column name(s) from the data.frame of the OMLDataSet that refer to the target feature(s).

Usage

```
makeOMLDataSet(desc, data, colnames.old = colnames(data),
  colnames.new = colnames(data), target.features = NULL)
```

Arguments

desc [OMLDataSetDescription]

Data set description.

data [data.frame]

The data set.

colnames.old [character]

Names of the features that were uploaded to the server.

colnames.new [character]

Names of the features that are displayed.

target.features

[character]

Name(s) of the target feature(s). If set, this will replace the default target in

desc.

Value

OMLDataSet

See Also

Other data set-related functions: OMLDataSetDescription, convertMlrTaskToOMLDataSet, convertOMLDataSetToMlr, deleteOMLObject, getOMLDataSet, listOMLDataSets, tagOMLObject, uploadOMLDataSet

Examples

```
data("airquality")
dsc = "Daily air quality measurements in New York, May to September 1973.
This data is taken from R."
cit = "Chambers, J. M., Cleveland, W. S., Kleiner, B. and Tukey, P. A. (1983) Graphical
Methods for Data Analysis. Belmont, CA: Wadsworth."
desc_airquality = makeOMLDataSetDescription(name = "airquality",
  description = dsc,
  creator = "New York State Department of Conservation (ozone data) and the National
    Weather Service (meteorological data)",
  collection.date = "May 1, 1973 to September 30, 1973",
  language = "English",
  licence = "GPL-2",
  url = "https://stat.ethz.ch/R-manual/R-devel/library/datasets/html/00Index.html",
  default.target.attribute = "Ozone",
  citation = cit,
  tags = "R")
airquality_oml = makeOMLDataSet(desc = desc_airquality,
  data = airquality,
  colnames.old = colnames(airquality),
  colnames.new = colnames(airquality),
  target.features = "Ozone")
```

OMLDataSetDescription Construct OMLDataSetDescription.

Description

Creates a description for an OMLDataSet. To see a full list of all elements, please see the XSD.

Usage

```
makeOMLDataSetDescription(id = 0L, name, version = "0", description,
  format = "ARFF", creator = NA_character_,
  contributor = NA_character_, collection.date = NA_character_,
  upload.date = as.POSIXct(Sys.time()), language = NA_character_,
  licence = NA_character_, url = NA_character_,
  default.target.attribute = NA_character_,
  row.id.attribute = NA_character_, ignore.attribute = NA_character_,
  version.label = NA_character_, citation = NA_character_,
  visibility = NA_character_, original.data.url = NA_character_,
  paper.url = NA_character_, update.comment = NA_character_,
  md5.checksum = NA_character_, status = NA_character_,
  tags = NA_character_)
```

Arguments

id [integer(1)]

Data set ID, autogenerated by the server. Ignored when set manually.

name [character(1)]

The name of the data set.

version [character(1)]

Version of the data set, autogenerated by the server. Ignored when set manually.

description [character(1)]

Description of the data set, given by the uploader.

format [character(1)]

Format of the data set. At the moment this is always "ARFF".

creator [character]

The person(s), that created this data set. Optional.

contributor [character]

People, that contibuted to this version of the data set (e.g., by reformatting).

Optional.

collection.date

[character(1)]

The date the data was originally collected. Given by the uploader. Optional.

upload.date [POSIXt]

The date the data was uploaded. Added by the server. Ignored when set manu-

ally.

language [character(1)]

Language in which the data is represented. Starts with 1 upper case letter, rest

lower case, e.g. 'English'

licence [character(1)]

Licence of the data. NA means: Public Domain or "don't know/care".

url [character(1)]

Valid URL that points to the data file.

default.target.attribute

[character]

The default target attribute, if it exists. Of course, tasks can be defined that use

another attribute as target.

row.id.attribute

[character(1)]

The attribute that represents the row-id column, if present in the data set. Else

NA.

ignore.attribute

[character]

Attributes that should be excluded in modelling, such as identifiers and indexes.

Optional.

version.label [character(1)]

Version label provided by user, something relevant to the user. Can also be a

date, hash, or some other type of id.

citation [character(1)] Reference(s) that should be cited when building on this data. visibility [character(1)] Who can see the data set. Typical values: 'Everyone', 'All my friends', 'Only me'. Can also be any of the user's circles. original.data.url [character(1)] For derived data, the url to the original data set. This can be an OpenML data set, e.g. 'http://openml.org/d/1'. [character(1)] paper.url Link to a paper describing the data set. update.comment [character(1)] When the data set is updated, add an explanation here. md5.checksum [character(1)] MD5 checksum to check if the data set is downloaded without corruption. Can be ignored by user. [character(1)] status The status of the data set, autogenerated by the server. Ignored when set manually. [character] tags

Optional tags for the data set.

See Also

Other data set-related functions: OMLDataSet, convertMlrTaskToOMLDataSet, convertOMLDataSetToMlr, deleteOMLObject, getOMLDataSet, listOMLDataSets, tagOMLObject, uploadOMLDataSet

Examples

```
data("airquality")
dsc = "Daily air quality measurements in New York, May to September 1973.
This data is taken from R."
cit = "Chambers, J. M., Cleveland, W. S., Kleiner, B. and Tukey, P. A. (1983) Graphical
Methods for Data Analysis. Belmont, CA: Wadsworth."
desc_airquality = makeOMLDataSetDescription(name = "airquality",
  description = dsc,
  creator = "New York State Department of Conservation (ozone data) and the National
    Weather Service (meteorological data)",
  collection.date = "May 1, 1973 to September 30, 1973",
  language = "English",
  licence = "GPL-2",
  url = "https://stat.ethz.ch/R-manual/R-devel/library/datasets/html/00Index.html",
  default.target.attribute = "Ozone",
  citation = cit,
  tags = "R")
airquality_oml = makeOMLDataSet(desc = desc_airquality,
  data = airquality,
  colnames.old = colnames(airquality),
```

populateOMLCache 47

```
colnames.new = colnames(airquality),
target.features = "Ozone")
```

populateOMLCache

Download a bunch of OpenML objects to cache.

Description

Given a set of OML object ids, the function populates the cache directory by downloading the corresponding objects. This can avoid network access in later experiments, as you can retrieve all objects from the cache on disk. This is of particular interest in highly parallel computations on a cluster with a shared file system.

Usage

```
populateOMLCache(data.ids = integer(0L), task.ids = integer(0L),
  flow.ids = integer(0L), run.ids = integer(0L), verbosity = NULL,
  overwrite = FALSE)
```

Arguments

data.ids	[integer] Dataset IDs. Default is none.
task.ids	[integer] Task IDs. Default is none.
flow.ids	[integer] Flow IDs. Default is none.
run.ids	[integer] Run IDs. Default is none.
verbosity	[integer(1)]Print verbose output on console? Possible values are:0: normal output,1: info output,2: debug output.Default is set via setOMLConfig.
overwrite	[integer(1)] Should files that are already in cache be overwritten?

Value

invisible(NULL)

48 runTaskFlow

Reproduce the Run		
-------------------	--	--

Description

Uses the ID of the run and tries to reproduce its results by downloading the flow and applying it to the respective task.

Usage

```
runTaskFlow(task, flow, par.list, seed = 1, predict.type = NULL,
  verbosity = NULL, models = TRUE)
```

Arguments

task	[OMLTask] An OpenML task.
flow	[OMLFlow] Flow that is applied to the Task.
par.list	[listlOMLRunParList] Can be either a named list containing the hyperparameter values or a OMLRunParList.
seed	[numeric(1) OMLSeedParList] Set a seed to make the run reproducible. Default is 1 and sets the seed using set.seed(1).
predict.type	[character(1)] Optional. See setPredictType. Default is "response".
verbosity	 [integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via setOMLConfig.
models	[logical(1)] This argument is passed to benchmark. Should all fitted models be stored in the ResampleResult? Default is TRUE.

Value

 ${\tt OMLMlrRun} \ , an {\tt OMLRun}.$

runTaskMlr 49

	runTaskMlr	Run mlr learner on OpenML task.	
--	------------	---------------------------------	--

Description

Run task with a specified learner from **mlr** and produce predictions. By default, the evaluation measure contained in the task is used.

Usage

```
runTaskMlr(task, learner, measures = NULL, verbosity = NULL,
  seed = 1, scimark.vector = NULL, models = TRUE, ...)
```

Arguments

seed

task [OMLTask]

An OpenML task.

learner [Learner]

Learner from package mlr to run the task.

measures [Measure

Additional measures that should be computed.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig. [numeric(1)lOMLSeedParList]

Set a seed to make the run reproducible. Default is 1 and sets the seed using

set.seed(1).

scimark.vector [numeric(6)]

Optional vector of performance measurements computed by the scientific Sci-Mark benchmark. May be computed using the **rscimark** R package. Default is

NULL, which means no performance measurements.

models [logical(1)]

This argument is passed to benchmark. Should all fitted models be stored in the

ResampleResult? Default is TRUE.

... [any]

Further arguments that are passed to convertOMLTaskToMlr.

Value

list Named list with the following components:

run The OMLRun object.

bmr Benchmark result returned by benchmark.

flow The generated OMLFlow object.

50 saveOMLConfig

See Also

```
getOMLTask, makeLearner
```

Examples

```
# \dontrun{
# library(mlr)
# ## run a single flow (learner) on a single task
# task = getOMLTask(57)
# lrn = makeLearner("classif.rpart")
# res = runTaskMlr(task, lrn)
# ## the result "res" is a list, storing information on the actual "run", the
# ## corresponding benchmark result "bmr" and the applied "flow"
# }
```

saveOMLConfig

Saves a list of OpenML configuration settings to file.

Description

The new configuration is automatically assigned via setOMLConfig if all checks pass. If you don't set a certain option, package defaults will be inserted into the file.

Usage

```
saveOMLConfig(server = NULL, verbosity = NULL, apikey = NULL,
  cachedir = NULL, arff.reader = NULL, confirm.upload = NULL,
  overwrite = FALSE)
```

Arguments

server [character(1)]

URL of the XML API endpoint.

verbosity [integer(1)]

Verbosity level. Possible values are 0 (normal output), 1 (info output), 2 (debug

output).

apikey [character(1)]

Your OpenML API key. Log in to OpenML, move to your profile to get it.

cachedir [character(1)]

Path to the cache directory.

arff.reader [character(1)]

Name of the package which should be used to parse arff files. Possible are

"RWeka", which is the default and "farff".

confirm.upload [logical(1)]

Should the user be asked for confirmation before upload of OML objects?

overwrite [logical(1)]

Should an existing file be overwritten? Default is FALSE.

setOMLConfig 51

See Also

 $Other config: configuration, {\tt getOMLConfig}, {\tt loadOMLConfig}, {\tt setOMLConfig}$

setOMLConfig	Settter for configuration settings.

Description

Set and overwrite configuration settings.

Usage

```
setOMLConfig(server = NULL, verbosity = NULL, apikey = NULL,
cachedir = NULL, arff.reader = NULL, confirm.upload = NULL)
```

Arguments

server	[character(1)] URL of the XML API endpoint.
verbosity	[integer(1)] Verbosity level. Possible values are 0 (normal output), 1 (info output), 2 (debug output).
apikey	[character(1)] Your OpenML API key. Log in to OpenML, move to your profile to get it.
cachedir	[character(1)] Path to the cache directory.
arff.reader	[character(1)] Name of the package which should be used to parse arff files. Possible are "RWeka", which is the default and "farff".
confirm.upload	[logical(1)] Should the user be asked for confirmation before upload of OML objects?

Value

Invisibly returns a list of configuration settings.

See Also

 $Other \ config: \ configuration, \ get OML Config, \ load OML Config, \ save OML Config$

52 tagOMLObject

tagOMLObject Tagging of OpenML objects
--

Description

Add or remove a specific tag to a OpenML data, task, flow or run.

Usage

```
tagOMLObject(ids, object = c("data", "task", "flow", "run"), tags,
  verbosity = NULL)
untagOMLObject(ids, object = c("data", "task", "flow", "run"), tags,
  verbosity = NULL)
```

Arguments

ids [integer]

The IDs of the respective objects.

object [character(1)]

A character that specifies the object you want to delete from the server. Can be

either "data", "task", "flow" or "run".

tags [character]

The tags that should be added/removed.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

uploadOMLDataSet 53

uploadOMLDataSet Upload a data set to the OpenML server.
--

Description

Share a data set by uploading it to the OpenML server.

Usage

```
uploadOMLDataSet(x, tags = NULL, description = NULL,
  confirm.upload = NULL, verbosity = NULL)
```

Arguments

x [Taskl[OMLDataSet]

Contains the data set that should be uploaded.

tags [character]

The tags that should be added after uploading.

description [character(1)lOMLDataSetDescription]

Either an OMLDataSetDescription or a character (1) that describes the data.

For the latter, all other relevant information is autogenerated from the Task.

confirm.upload [logical(1)]

Should the user be asked to confirm the upload? Default is the setting from your

config.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

```
invisible(numeric(1)) . The ID of the data (data.id).
```

Note

This function will reset the cache of listOMLDataSets on success.

See Also

Other uploading functions: makeOMLStudy, uploadOMLFlow, uploadOMLRun, uploadOMLStudy

54 uploadOMLFlow

3 10.0 -3	** 1 1 0 14
uploadOMLFlow	Upload an OpenML.

Description

Share a flow by uploading it to the OpenML server.

Usage

```
uploadOMLFlow(x, tags = NULL, verbosity = NULL,
confirm.upload = NULL, sourcefile = NULL, binaryfile = NULL)
```

Arguments

x [OMLFlowlLearner]

The flow that should be uploaded.

tags [character]

The tags that should be added after uploading.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

confirm.upload [logical(1)]

Should the user be asked to confirm the upload? Default is the setting from your

config.

sourcefile [character(1)]

The file path to the flow (not needed for Learner).

binaryfile [character(1)]

The file path to the flow (not needed for Learner).

Value

```
invisible(numeric) . The ID of the flow (flow.id).
```

Note

This function will reset the cache of listOMLFlows on success.

See Also

Other uploading functions: makeOMLStudy, uploadOMLDataSet, uploadOMLRun, uploadOMLStudy

uploadOMLRun 55

uploadOMLRun	Upload an OpenML run.	

Description

Share a run of a flow on a given OpenML task by uploading it to the OpenML server.

Usage

```
uploadOMLRun(run, upload.bmr = FALSE, tags = NULL,
  confirm.upload = NULL, verbosity = NULL, ...)
```

Arguments

run [OMLRun|OMLM1rRun]

The run that should be uploaded. Either a OMLRun or a run created with OMLMlrRun.

upload.bmr [logical(1)]

Should the Benchmark result created by benchmark function be uploaded? If set to TRUE and the flow is created via makeTuneWrapper, an arff file that contains

the hyperparameter optimization trace is also uploaded.

tags [character]

The tags that should be added after uploading.

confirm.upload [logical(1)]

Should the user be asked to confirm the upload? Default is the setting from your

config.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

... Not used.

Value

invisible(numeric(1)) . The run ID.

Note

This function will reset the cache of listOMLRuns and listOMLRunEvaluations on success.

By default you will be asked to confirm the upload. You can deactivate the need for confirmation by setting "confirm.upload = TRUE" via setOMLConfig or set the corresponding argument each time you call the function.

56 uploadOMLStudy

Other run-related functions: convertOMLM1rRunToBMR, convertOMLRunToBMR, deleteOMLObject, getOMLRun, listOMLRuns, makeOMLRunParameter, makeOMLRun, tagOMLObject

uploadOMLStudy

Upload OpenML Study information.

Description

A OpenML study is a collection of OpenML objects. If you create a study through the website https://www.openml.org/new/study, you can also specify an alias which can be used to access the study.

Usage

```
uploadOMLStudy(x, confirm.upload = NULL, verbosity = NULL)
```

Arguments

x [[OMLStudy]

Contains the study information that should be uploaded.

confirm.upload [logical(1)]

Should the user be asked to confirm the upload? Default is the setting from your

config.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.

Value

OMLStudy .

See Also

Other uploading functions: makeOMLStudy, uploadOMLDataSet, uploadOMLFlow, uploadOMLRun

uploadOMLTask 57

uploadOMLTask	Upload a task to the OpenML server.	
---------------	-------------------------------------	--

Description

Share a task by uploading it to the OpenML server.

Usage

```
uploadOMLTask(task.type, data.id, target.feature, estimation.procedure,
  evaluation.measure = NULL, tags = NULL, description = NULL,
  confirm.upload = NULL, verbosity = NULL)
```

Arguments

task.type [character(1)]

The type of the task to upload. See listOMLTaskTypes() to list all valid task

types.

data.id [integer(1)]

ID of the data set.

target.feature [character(1)]

The target feature of the dataset.

estimation.procedure

[character(1)]

The estimation procedure for the evaluation. See listOMLEstimationProce-

dures() to list all procedures.

evaluation.measure

[character(1)]

The evaluation measure for the evaluation. See listOMLEvaluationMeasures()

to list all possible measures.

tags [character]

The tags that should be added after uploading.

description [character(1)lOMLDataSetDescription]

Either an OMLDataSetDescription or a character(1) that describes the data.

For the latter, all other relevant information is autogenerated from the Task.

confirm.upload [logical(1)]

Should the user be asked to confirm the upload? Default is the setting from your

config.

verbosity [integer(1)]

Print verbose output on console? Possible values are:

0: normal output,1: info output,2: debug output.

Default is set via setOMLConfig.
