

# Package ‘fdistr’

December 2, 2019

**Type** Package

**Title** Frequency Distribution Tables

**Version** 0.1.0

**Date** 2019-11-06

**Description** Provides functionality to generate a frequency distribution table from a set of observations and plot the frequency distribution using a Pareto chart.

**Depends** R (>= 3.6)

**License** MIT + file LICENSE

**URL** <https://github.com/dtminnick/fdistr>

**BugReports** <https://github.com/dtminnick/fdistr/issues>

**Encoding** UTF-8

**LazyData** true

**Imports** dplyr (>= 0.8.3), ggplot2 (>= 3.2.1), magrittr (>= 1.5), stats (>= 3.6.1), usethis (>= 1.5.1), utils (>= 3.6.1)

**Suggests** knitr (>= 1.22), rmarkdown (>= 1.12), testthat (>= 2.2.1)

**RoxygenNote** 7.0.0

**NeedsCompilation** no

**Author** Donnie Minnick [aut, cre]

**Maintainer** Donnie Minnick <donnie.minnick@gmail.com>

**Repository** CRAN

**Date/Publication** 2019-12-02 14:30:06 UTC

## R topics documented:

create_pareto . . . . .	2
create_table . . . . .	2
words . . . . .	3

<b>Index</b>	<b>5</b>
--------------	----------

---

create_pareto	<i>Create Pareto Chart</i>
---------------	----------------------------

---

### Description

create\_pareto generates a Pareto chart using the group, frequency and cumulative frequency columns of a frequency distribution table.

### Usage

```
create_pareto(df, title = "Pareto Chart", subtitle = "",
              caption = "", x_label = "Groups", y_label = "Frequency")
```

### Arguments

df	Data frame containing a frequency distribution table.
title	Character string; title to be displayed on Pareto chart. Default is "Pareto Chart".
subtitle	Character string; subtitle to be displayed on chart. Default is "".
caption	Character string; caption to be displayed on the chart. Default is "".
x_label	Character string; x axis label to be displayed on the chart. Default is "Groups".
y_label	Character string; y axis label to be displayed on the chart. Default is "Frequency".

### Value

A plot containing a Pareto chart. If an error or warning occurs, a message will be printed to the console and the function will return NULL.

### Examples

```
source <- c(1, 1, 1, 1, 2, 2, 2, 3, 3, 4)
table <- create_table(source, dec_pos = 3)
plot <- create_pareto(table)
```

---

create_table	<i>Create Table</i>
--------------	---------------------

---

### Description

create\_table generates a frequency distribution table from a vector, list or data frame input.

### Usage

```
create_table(source, dec_pos = 2)
```

**Arguments**

source	Vector, list or data frame input. If the source is of class list, it will be simplified to a vector using <code>unlist</code> .
dec_pos	Number of positions to return in the frequency and cumulative frequency variables. Defaults to two positions following the decimal.

**Details**

`create_table` returns a data frame that includes five variables: `group`, `count`, `frequency`, `cumulative count` and `cumulative frequency`.

**Value**

A data frame containing the frequency distribution table. If an error or warning occurs, a message will be printed to the console and the function will return `NULL`.

**Examples**

```
source <- c(1, 1, 1, 1, 2, 2, 2, 3, 3, 4)
table <- create_table(source, dec_pos = 3)
```

---

words

*Words Dataset*

---

**Description**

A sample set of words taken from the first paragraph of James Joyce's short story "The Dead" to demonstrate the functionality in this package.

**Usage**

```
data(words)
```

**Format**

A data frame with 55 observations and 4 variables.

**Details**

The dataset includes the four variables.

`word` Character, word in the sample.

`first_letter` Character, first letter of the word.

`last_letter` Character, last letter of the word.

`letter_count` Integer, number of letters in the word.
