

# Package ‘mbRes’

January 29, 2022

**Type** Package

**Title** Integrating Multiple Biomarker Responses in Aquatic Organisms using Effect Size, Statistical Uncertainty, and Ecological Relevance

**Version** 0.1.3

**Description** Compute and visualize the ps-index, a new integrated index for multiple biomarker responses, as described in Pham & Sokolova (2022, unpublished).

**Depends** R (>= 4.1.0)

**Imports** cowplot (>= 1.1.1), data.table (>= 1.14.2), dplyr (>= 1.0.7),forcats (>= 0.5.1), ggforce (>= 0.3.3), ggplot2 (>= 3.3.5),grid, magrittr (>= 2.0.1), purrr (>= 0.3.4), rlang (>= 0.4.12),stats, tidyverse (>= 1.1.4), tibble (>= 3.1.6), utils

**Suggests** RProbSup (>= 3.0)

**BugReports** <https://github.com/phamdn/mbRes/issues>

**License** GPL-3

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 7.1.2

**NeedsCompilation** no

**Author** Duy Nghia Pham [aut, cre] (<<https://orcid.org/0000-0003-1349-1710>>),  
Inna M. Sokolova [aut] (<<https://orcid.org/0000-0002-2068-4302>>)

**Maintainer** Duy Nghia Pham <nghiapham@yandex.com>

**Repository** CRAN

**Date/Publication** 2022-01-28 23:00:02 UTC

<b>mbRes-package</b>	<i>mbRes: Integrating Multiple Biomarker Responses in Aquatic Organisms using Effect Size, Statistical Uncertainty, and Ecological Relevance</i>
----------------------	--

---

## Description

Compute and visualize the ps-index, a new integrated index for multiple biomarker responses, as described in Pham & Sokolova (2021, unpublished).

## Guidelines

ps-index is a new integrated index for multiple biomarker responses. `mbr` is the main function to compute and visualize the ps-index. `sokolova2021` is provided as a sample dataset. `compare` simulates a hypothetical dataset and compare the results of ps-index and two other integrated indices published earlier. The others are helper functions and are not meant to be called directly by users.

---

**cliff***Compute Effect Size*

---

## Description

`cliff` calculates Cliff's delta statistic using the rank sum method.

## Usage

```
cliff(v1, v0)
```

## Arguments

- |    |  |
|----|--|
| v1 | a vector, biomarker values from the treatment group. |
| v0 | a vector, biomarker values from the control group.   |

## Value

`cliff` returns a numeric that is the Cliff's delta of the treatment group.

## Examples

```
cliff(unlist(sokolova2021[7:12, 2]), unlist(sokolova2021[1:6, 2]))
```

compare

*Hypothetical Case Study Analysis***Description**

`compare` generates a hypothetical dataset of biomarker responses and analyzes the dataset using three different strategies.

**Usage**

```
compare()
```

**Value**

`compare` returns a list of length 3:

tab	a list of length 9 pop the true population means of normal distributions pop_long the true population means in long format sam the sample dataset of biomarker responses sam_long the sample dataset in long format m mean biomarker responses by exposure group blaise2002 integrated index from an ordinalization method beliaeoff2002 integrated index from a standardization method eco assigned ecological relevance of biomarkers pham2021 ps-index from our estimation method
fig	a list of 2 ggplot objects <code>fig_sam</code> hypothetical dataset <code>fig_compare</code> result comparision of three methods
est	full results of our estimation method given by <code>mbr</code>

gobar

*Make Bar Plot***Description**

`gobar` creates bar plot of the ecological relevance. This is not meant to be called directly.

**Usage**

```
gobar(dat, hax, vax, sub, env = parent.frame())
```

**Arguments**

dat	a data frame with at least two columns.
hax	a character, name of the column to be used as the horizontal axis.
vax	a character, name of the column to be used as the vertical axis.
sub	a numeric, mean ecological relevance.
env	an environment, to access outer scope variables.

**Value**

ggbar returns a ggplot object.

---

**ggdot***Make Dot Plot*

---

**Description**

ggdot creates dot plot of the ps-index. This is not meant to be called directly.

**Usage**

```
ggdot(dat, hax, vax)
```

**Arguments**

dat	a data frame with at least two columns.
hax	a character, name of the column to be used as the horizontal axis.
vax	a character, name of the column to be used as the vertical axis.

**Value**

ggdot returns a ggplot object.

**ggheat***Make Heatmap***Description**

*ggheat* creates heatmaps of the Cliff's delta, surprisal, confidence interval width, and weighting factor. This is not meant to be called directly.

**Usage**

```
ggheat(
  dat,
  hax,
  vax,
  cell,
  nm,
  lim,
  lo,
  hi,
  diverging = FALSE,
  env = parent.frame()
)
```

**Arguments**

<code>dat</code>	a data frame with at least three columns.
<code>hax</code>	a character, name of the column to be used as the horizontal axis.
<code>vax</code>	a character, name of the column to be used as the vertical axis.
<code>cell</code>	a character, name of the column to be used as the cells.
<code>nm</code>	a character, name of the heatmap.
<code>lim</code>	a numeric vector, limits of the color scale.
<code>lo</code>	a character, color of the color scale low end.
<code>hi</code>	a character, color of the color scale high end.
<code>diverging</code>	a logical, whether to use diverging color gradient.
<code>env</code>	an environment, to access outer scope variables.

**Value**

*ggheat* returns a ggplot object.

---

<code>mbr</code>	<i>Compute and Visualize ps-index</i>
------------------	---------------------------------------

---

## Description

`mbr` calculates the ps-index and visualizes the whole process.

## Usage

```
mbr(df, df2 = NULL, rotate = FALSE, display = TRUE)
```

## Arguments

<code>df</code>	a data frame with the name of experimental groups or biomonitoring sites as the first column and the measurement of biomarkers as the remaining columns.
<code>df2</code>	a data frame with the name of biomarkers as the first column and the ecological relevance as the second column.
<code>rotate</code>	a logical, whether to rotate the biomarker labels in figures.
<code>display</code>	a logical, whether to display cell values in heatmaps.

## Details

The header of the first column can be any character, for example, 'group' or 'site'. The first name appearing in the first column will determine the control group or the reference site. The other names will be treatment groups or test sites. The header of the remaining columns will define the list of biomarkers.

The row order of biomarkers in `df2` must match the column order of biomarkers in `df`. If `df2` is missing, all biomarkers automatically have ecological relevance of only 1.

## Value

`mbr` returns a list of length 4:

<code>input</code>	a list of length 3
	<code>main</code> the input biomarker data frame
	<code>extra</code> a data frame with 2 columns: <code>biomarker</code> individual biomarker
	<code>eco</code> the input ecological relevance
	<code>eco.mean</code> the mean ecological relevance
<code>es</code>	a data frame with 14 columns: <code>treatment</code> treatment groups or test sites <code>control</code> control group or reference site <code>tm_size</code> the sample size of treatment group <code>ct_size</code> the sample size of control group

biomarker	individual biomarker
delta	the Cliff's delta of treatment group
delta.abs	the absolute Cliff's delta
pval	the P-Value
sval	the surprisal or S-Value
se	the standard error of Cliff's delta
ci.lower	the lower bound of the confidence interval
ci.upper	the upper bound of the confidence interval
ciw	the width of the confidence interval
eco	the ecological relevance of the biomarker
sval.cdf	the ascending rank of S-value by CDF method, see <a href="#">cume_dist</a>
ciw.cdf	the descending rank of confidence interval width by CDF method
eco.cdf	the ascending rank of ecological relevance by CDF method
weight	the total weighting factor
idx	a data frame with 2 columns:
	treatment treatment groups or test sites
	ps the ps-index
fig	a list of 6 ggplot objects
	delta the Cliff's delta
	sval the surprisal or S-value
	ciw confidence interval width
	eco the ecological relevance
	weight the weighting factor
	ps the ps-index

## Examples

```
mbr(sokolova2021, ecorelevance, rotate = TRUE) #might take more than 5s in some machines
```

## Description

perch analyses the biomarker results of Hansson et al. (2014) <doi:10.1007/s00244-013-9974-5>.

## Usage

```
perch()
```

## Value

perch returns a list of length 3:

tab	a list of length 2 hansson2014 biomarker data reported by Hansson et al. (2014) percheco assigned ecological relevance of biomarkers
fig	a list of 5 ggplot objects SG length-corrected somatic growth SCI somatic condition index GSI time-corrected gonadosomatic index LSI time-corrected liver somatic index EROD liver ethoxyresorufin-O-deethylase activity
est	full results of our estimation method given by mbr

Biomarker Investigations in Adult Female Perch (*Perca fluviatilis*) From Industrialised Areas in Northern Sweden in 2003. *Archives of Environmental Contamination and Toxicology*, 66(2), 237–247. doi: [10.1007/s00244-013-9974-5](https://doi.org/10.1007/s00244-013-9974-5).

---

resampling

*Measure Statistical Uncertainty*

---

## Description

resampling performs randomization test and bootstrapping to calculate P-value and percentile bootstrap confidence interval of Cliff's delta.

## Usage

```
resampling(v1, v0, nrand = 1999, nboot = 1999, conf.level = 0.95, seed = 1)
```

## Arguments

v1	a vector, biomarker values from the treatment group.
v0	a vector, biomarker values from the control group.
nrand	an integer, the number of randomization samples. The default value is 1999.
nboot	an integer, the number of bootstrap samples. The default value is 1999.
conf.level	a numeric, the confidence level to calculate percentile bootstrap confidence interval. The default value is 0.95.
seed	an integer, the seed for random number generation. Setting a seed ensures the reproducibility of the result. See <a href="#">set.seed</a> for more details.

## Value

`resampling` returns a one-row data frame with four numerics:

<code>delta</code>	the Cliff's delta of the treatment group.
<code>pval</code>	the observed P-value p under the null hypothesis.
<code>sval</code>	the S-value s calculated from P-value p.
<code>se</code>	the standard error of Cliff's delta.
<code>ci.lower</code>	the lower bound of the confidence interval.
<code>ci.upper</code>	the upper bound of the confidence interval.
<code>ciw</code>	the width of the confidence interval.

## Examples

```
resampling(unlist(sokolova2021[7:12, 2]), unlist(sokolova2021[1:6, 2]))
```

## Description

`sokolova2021` contains the biomarker responses of the blue mussel *Mytilus edulis* to organic UV filters ensulizole and octocrylene. `ecorelevance` contains the ecological relevance of the biomarkers.

**Usage**

```
sokolova2021
```

```
  ecorelevance
```

**Format**

sokolova2021 is a data frame with 30 rows and 31 variables:

**Exposure** 5 experimental groups:

**CTRL** control group

**EN10** 10 ug/L of ensulizole

**EN100** 100 ug/L of ensulizole

**OC10** 10 ug/L of octocrylene

**OC100** 100 ug/L of octocrylene

**NRR** lysosomal membrane stability

**ROS** reactive oxygen species generation

**TBARSd** lipid peroxidation in digestive gland

**TBARSg** lipid peroxidation in gills

**PCd** protein carbonylation in digestive gland

**PCg** protein carbonylation in gills

**CPRd** NADPH–P450 reductase activity in digestive gland

**CPRg** NADPH–P450 reductase activity in gills

**ERODd** 7-ethoxyresorufin-O-deethylase activity in digestive gland

**ERODg** 7-ethoxyresorufin-O-deethylase activity in gills

**CEd** carboxylesterase activity in digestive gland

**CEg** carboxylesterase activity in gills

**GSTD** glutathione-S-transferase activity in digestive gland

**GSTg** glutathione-S-transferase activity in gills

**GRd** glutathione reductase activity in digestive gland

**GRg** glutathione reductase activity in gills

**CTSDT<sub>d</sub>** total cathepsin D activity in digestive gland

**CTSDT<sub>g</sub>** total cathepsin D activity in gills

**CTSDF<sub>d</sub>** free cathepsin D activity in digestive gland

**CTSDF<sub>g</sub>** free cathepsin D activity in gills

**Cas2** caspase 2

**Cas3** caspase 3

**BAX** Bcl-2-associated X protein

**Bcl-2** B-cell lymphoma 2

**p53** tumor protein 53

**GADD45** growth arrest and DNA-damage-inducible protein 45

**NF-kB** nuclear factor kB

**IL-17** interleukin 17

**COX-2** cyclooxygenase 2

**ACC** acetyl-CoA carboxylase

ecorelevance is a data frame with 30 rows and 2 variables:

**Biomarker** 30 endpoints as documented in sokolova2021

**Eco** ecological relevance
