Package 'rethnicity'

May 31, 2022
Type Package
Title Predicting Ethnic Group from Names
Version 0.2.3
Maintainer Fangzhou Xie <fangzhou.xie@rutgers.edu></fangzhou.xie@rutgers.edu>
Description Implementation of the race/ethnicity prediction method, described in ``rethnicity: An R package for predicting ethnicity from names" by Fangzhou Xie (2022) <doi:10.1016 j.softx.2021.100965=""> and ``Rethnicity: Predicting Ethnicity from Names" by Fangzhou Xie (2021) <arxiv:2109.09228>.</arxiv:2109.09228></doi:10.1016>
License CC BY-NC-SA 4.0
Encoding UTF-8
RoxygenNote 7.2.0
<pre>URL https://github.com/fangzhou-xie/rethnicity</pre>
<pre>BugReports https://github.com/fangzhou-xie/rethnicity/issues</pre>
Depends R (>= $3.4.0$)
LinkingTo Rcpp, RcppEigen, RcppThread (>= 2.1.3)
Imports Rcpp, cli
Suggests knitr, rmarkdown, testthat (>= 3.0.0), magrittr, parallel
VignetteBuilder knitr
Language en-US
Config/testthat/edition 3
NeedsCompilation yes

R topics documented:
predict_ethnicity

2 predict_ethnicity

Index 5

Description

Predict ethnicity either by last names or both first and last names. This is the default and recommended method for prediction.

Usage

```
predict_ethnicity(
  firstnames = NULL,
  lastnames = NULL,
  method = "fullname",
  threads = 0,
  na.rm = FALSE
)
```

Arguments

firstnames	A character vector of first names. Default to NULL. Only use this if you are using 'method' = 'fullname'.
lastnames	A character vector of last names. Default to NULL. Use this in both 'fullname' and 'lastname' methods.
method	"fullname" or "lastname". Inference method to choose from.
threads	single integer. Number of threads to use for multi-threading.
na.rm	TRUE or FALSE (bool). If TRUE, then the NAs will be removed; if FALSE, then return error if there is NA in the arguments.

Value

data.frame with probability of being each ethnic group and the predicted group (one with highest probability)

Examples

```
predict_ethnicity(firstnames = "Alan", lastnames = "Turing")
```

predict_fullname 3

<pre>predict_fullname</pre>	Predict ethnicity from full name
pr carce_rarrianc	1 react chancery from full hance

Description

Predicts ethnicity from first names and last names, using self-trained model with customized labels. This is designed for advanced users who wish to use their own models. For most use cases, use [predict_ethnicity()] for prediction.

Usage

```
predict_fullname(
   firstnames,
   lastnames,
   na.rm = FALSE,
   threads = 0L,
   labels = NULL,
   model_path = NULL)
```

Arguments

firstnames character vector, first names lastnames character vector, last names

na.rm bool, default to FALSE, whether to remove the na in the 'lastnames'

threads int, number of threads for multi-threading

labels character vector, labels of the classification model, needs to be in the same order

as the trained model

model_path character file path, the path to the trained model in .json format (converted from

Keras by frugally-deep)

Value

data.frame with predicted probability and predicted ethnicity

predict_lastname

Description

Predicts ethnicity from last names, using self-trained model with customized labels. This is designed for advanced users who wish to use their own models. For most use cases, use [predict_ethnicity()] for prediction.

4 predict_lastname

Usage

```
predict_lastname(
  lastnames,
  na.rm = FALSE,
  threads = 0L,
  labels = NULL,
  model_path = NULL)
```

Arguments

lastnames character vector, last names

na.rm bool, default to FALSE, whether to remove the na in the 'lastnames'

threads int, number of threads for multi-threading

labels character vector, labels of the classification model, needs to be in the same order

as the trained model

model_path character file path, the path to the trained model in .json format (converted from

Keras by frugally-deep)

Value

data.frame with predicted probability and predicted ethnicity
