

Package ‘see’

August 10, 2022

Type Package

Title Model Visualisation Toolbox for 'easystats' and 'ggplot2'

Version 0.7.2

Maintainer Daniel Lüdecke <d.luedcke@uke.de>

Description Provides plotting utilities supporting easystats-packages

(<https://github.com/easystats/easystats>) and some extra themes,
geoms, and scales for 'ggplot2'. Color scales are based on
<https://materialui.co/colors>.

License GPL-3

URL <https://easystats.github.io/see/>

BugReports <https://github.com/easystats/see/issues>

Depends graphics, grDevices, R (>= 3.5), stats

Imports bayestestR (>= 0.12.1), datawizard (>= 0.5), effectsize (>= 0.7.0), ggplot2 (>= 3.3.6), insight (>= 0.18.0), parameters (>= 0.18.1)

Suggests brms, coda, correlation, emmeans, factoextra, ggdist, ggraph, ggrepel, ggridges, ggsome, glmmTMB, grid, httr, lavaan, lme4, logspline, MASS, mclust, mgcv, metafor, modelbased, NbClust, nFactors, patchwork, performance (>= 0.9.0), poorman, psych, qqplotr, randomForest, rmarkdown, rstanarm, scales (>= 1.2.0), splines, testthat (>= 3.1.0), tidygraph, vdiff

Config/testthat.edition 3

Encoding UTF-8

Language en-US

RoxygenNote 7.2.1

add_plot_attributes *Complete figure with its attributes*

Description

The `data_plot()` function usually stores information (such as title, axes labels, etc.) as attributes, while `add_plot_attributes()` adds this information to the plot.

Usage

```
add_plot_attributes(x)
```

Arguments

x An object.

Examples

```
## Not run:
library(rstanarm)
library(bayestestR)
library(see)
library(ggplot2)

model <- stan_glm(
  Sepal.Length ~ Petal.Width + Species + Sepal.Width,
  data = iris,
  chains = 2, iter = 200
)

result <- hdi(model, ci = c(0.5, 0.75, 0.9, 0.95))
data <- data_plot(result, data = model)

p <- ggplot(
  data,
  aes(x = x, y = y, height = height, group = y, fill = fill)
) +
  ggridges::geom_ridgeline_gradient()

p
p + add_plot_attributes(data)

## End(Not run)
```

bluebrown_colors *Extract blue-brown colors as hex codes*

Description

Can be used to get the hex code of specific colors from the blue-brown color palette. Use `bluebrown_colors()` to see all available colors.

Usage

```
bluebrown_colors(...)
```

Arguments

... Character names of colors.

Value

A character vector with color-codes.

Examples

```
bluebrown_colors()  
bluebrown_colors("blue", "brown")
```

coord_radar	<i>Radar coordinate system</i>
-------------	--------------------------------

Description

Add a radar coordinate system useful for radar charts.

Usage

```
coord_radar(theta = "x", start = 0, direction = 1, ...)
```

Arguments

theta	variable to map angle to (x or y)
start	Offset of starting point from 12 o'clock in radians. Offset is applied clockwise or anticlockwise depending on value of direction.
direction	1, clockwise; -1, anticlockwise
...	Other arguments to be passed to ggproto.

Examples

```
# Create a radar/spider chart with ggplot:  
if (require("datawizard") && require("ggplot2")) {  
  data(iris)  
  data <- aggregate(iris[-5], list(Species = iris$Species), mean)  
  data <- data_to_long(  
    data,  
    c("Sepal.Length", "Sepal.Width", "Petal.Length", "Petal.Width")  
  )  
  
  ggplot(data, aes(x = name, y = value, color = Species, group = Species)) +  
    geom_polygon(fill = NA, size = 2) +  
    coord_radar(start = -pi / 4)  
}
```

<code>data_plot</code>	<i>Prepare objects for plotting or plot objects</i>
------------------------	---

Description

`data_plot()` extracts and transforms an object for plotting, while `plot()` visualizes results of functions from different packages in **easystats-project**. See the documentation for your object's class:

- `bayestestR::bayesfactor_models()`
- `bayestestR::bayesfactor_parameters()`
- `bayestestR::equivalence_test()`
- `bayestestR::estimate_density()`
- `bayestestR::hdi()`
- `bayestestR::p_direction()`
- `bayestestR::p_significance()`
- `bayestestR::si()`
- `effectsize::effectsize()`
- `modelbased::estimate_contrasts()`
- `parameters::compare_parameters()`
- `parameters::describe_distribution()`
- `parameters::model_parameters()`
- `parameters::principal_components()`
- `parameters::n_clusters()`
- `parameters::n_factors()`
- `parameters::simulate_parameters()`
- `performance::check_collinearity()`
- `performance::check_heteroscedasticity()`
- `performance::check_homogeneity()`
- `performance::check_normality()`
- `performance::check_outliers()`
- `performance::compare_performance()`
- `performance::performance_roc()`
- `performance::check_posterior_predictions()`

Usage

```
data_plot(x, data = NULL, ...)
```

Arguments

x	An object.
data	The original data used to create this object. Can be a statistical model.
...	Arguments passed to or from other methods.

Details

`data_plot()` is in most situation not needed when the purpose is plotting, since most `plot()`-functions in `see` internally call `data_plot()` to prepare the data for plotting.

Many `plot()`-functions have a `data`-argument that is needed when the data or model for plotting can't be retrieved via `data_plot()`. In such cases, `plot()` gives an error and asks for providing data or models.

Most `plot()`-functions work out-of-the-box, i.e. you don't need to do much more than calling `plot(<object>)` (see 'Examples'). Some `plot`-functions allow to specify arguments to modify the transparency or color of geoms, these are shown in the 'Usage' section.

[Package-Vignettes](#)

Examples

```
## Not run:
library(bayestestR)
if (require("rstanarm")) {
  model <- stan_glm(
    Sepal.Length ~ Petal.Width * Species,
    data = iris,
    chains = 2, iter = 200, refresh = 0
  )

  x <- rope(model)
  plot(x)

  x <- hdi(model)
  plot(x) + theme_modern()

  data <- rnorm(1000, 1)
  x <- p_direction(data)
  plot(x)

  x <- p_direction(model)
  plot(x)

  model <- stan_glm(
    mpg ~ wt + gear + cyl + disp,
    chains = 2,
    iter = 200,
```

```

refresh = 0,
data = mtcars
)
x <- equivalence_test(model)
plot(x)
}

## End(Not run)

```

flat_colors*Extract Flat UI colors as hex codes***Description**

Can be used to get the hex code of specific colors from the Flat UI color palette. Use `flat_colors()` to see all available colors.

Usage

```
flat_colors(...)
```

Arguments

`...` Character names of colors.

Value

A character vector with color-codes.

Examples

```

flat_colors()

flat_colors("dark red", "teal")

```

geom_binomdensity*Add dot-densities for binary y variables***Description**

Add dot-densities for binary y variables

Usage

```
geom_binomdensity(data, x, y, scale = "auto", ...)
```

Arguments

data	A dataframe.
x, y	Characters corresponding to the x and y axis. Note that y must be a variable with two unique values.
scale	Character specifying method of scaling the dot-densities. Can be: 'auto' (corresponding to the square root of the proportion), 'proportion', 'density' or a custom list with values for each factor level (see examples).
...	Other arguments passed to <code>ggdist::geom_dots</code> .

Examples

```
library(ggplot2)
library(see)

data <- iris[1:100, ]

ggplot() +
  geom_binomdensity(data,
    x = "Sepal.Length",
    y = "Species",
    fill = "red",
    color = NA
  )

# Different scales
data[1:70, "Species"] <- "setosa" # Create unbalanced proportions

ggplot() +
  geom_binomdensity(data, x = "Sepal.Length", y = "Species", scale = "auto")
ggplot() +
  geom_binomdensity(data, x = "Sepal.Length", y = "Species", scale = "density")
ggplot() +
  geom_binomdensity(data, x = "Sepal.Length", y = "Species", scale = "proportion")
ggplot() +
  geom_binomdensity(data,
    x = "Sepal.Length", y = "Species",
    scale = list("setosa" = 0.4, "versicolor" = 0.6)
  )
```

geom_from_list

Create ggplot2 geom(s) from a list

Description

These helper functions are built on top of `ggplot2::layer()` and can be used to add geom(s), whose type and content are specified as a list.

Usage

```
geom_from_list(x, ...)
geoms_from_list(x, ...)
```

Arguments

- | | |
|------------------|--|
| <code>x</code> | A list containing: |
| | <ul style="list-style-type: none"> • a geom type (e.g. <code>geom = "point"</code>), • a list of aesthetics (e.g. <code>aes = list(x = "mpg", y = "wt")</code>), • some data (e.g. <code>data = mtcars</code>), • and some other parameters. |
| | For <code>geoms_from_list()</code> ("geoms" with an "s"), the input must be a list of lists, ideally named " <code>l1</code> ", " <code>l2</code> ", " <code>l3</code> ", etc. |
| <code>...</code> | Additional arguments passed to <code>ggplot2::layer()</code> . |

Examples

```
library(ggplot2)

# Example 1 (basic geoms and labels) -----
l1 <- list(
  geom = "point",
  data = mtcars,
  aes = list(x = "mpg", y = "wt", size = "hp", color = "hp"),
  show.legend = c("size" = FALSE)
)
l2 <- list(
  geom = "labs",
  title = "A Title"
)

ggplot() +
  geom_from_list(l1) +
  geom_from_list(l2)

ggplot() +
  geoms_from_list(list(l1 = l1, l2 = l2))

# Example 2 (Violin, boxplots, ...) -----
l1 <- list(
  geom = "violin",
  data = iris,
  aes = list(x = "Species", y = "Sepal.Width")
)
l2 <- list(
  geom = "boxplot",
  data = iris,
  aes = list(x = "Species", y = "Sepal.Width"),
  outlier.shape = NA
```

```

)
l3 <- list(
  geom = "jitter",
  data = iris,
  width = 0.1,
  aes = list(x = "Species", y = "Sepal.Width")
)

ggplot() +
  geom_from_list(l1) +
  geom_from_list(l2) +
  geom_from_list(l3)

# Example 3 (2D density) -----
ggplot() +
  geom_from_list(list(
    geom = "density_2d", data = iris,
    aes = list(x = "Sepal.Width", y = "Petal.Length")
  ))
ggplot() +
  geom_from_list(list(
    geom = "density_2d_filled", data = iris,
    aes = list(x = "Sepal.Width", y = "Petal.Length")
  ))
ggplot() +
  geom_from_list(list(
    geom = "density_2d_polygon", data = iris,
    aes = list(x = "Sepal.Width", y = "Petal.Length")
  ))
ggplot() +
  geom_from_list(list(
    geom = "density_2d_raster", data = iris,
    aes = list(x = "Sepal.Width", y = "Petal.Length")
  )) +
  scale_x_continuous(expand = c(0, 0)) +
  scale_y_continuous(expand = c(0, 0))

# Example 4 (facet and coord flip) -----

ggplot(iris, aes(x = Sepal.Length, y = Petal.Width)) +
  geom_point() +
  geom_from_list(list(geom = "hline", yintercept = 2)) +
  geom_from_list(list(geom = "coord_flip")) +
  geom_from_list(list(geom = "facet_wrap", facets = "~ Species", scales = "free"))

# Example 5 (theme and scales) -----
ggplot(iris, aes(x = Sepal.Length, y = Petal.Width, color = Species)) +
  geom_point() +
  geom_from_list(list(geom = "scale_color_viridis_d", option = "inferno")) +
  geom_from_list(list(geom = "theme", legend.position = "top"))

ggplot(iris, aes(x = Sepal.Length, y = Petal.Width, color = Species)) +
  geom_point() +

```

```

geom_from_list(list(geom = "scale_color_material_d", palette = "rainbow")) +
geom_from_list(list(geom = "theme_void"))

# Example 5 (Smooths and side densities) ----

ggplot(iris, aes(x = Sepal.Length, y = Petal.Width)) +
  geom_from_list(list(geom = "point")) +
  geom_from_list(list(geom = "smooth", color = "red")) +
  geom_from_list(list(aes = list(x = "Sepal.Length"), geom = "ggscale::geom_xsidedensity")) +
  geom_from_list(list(geom = "ggscale::scale_xsided_continuous", breaks = NULL))

# Example 6 (ggraph) -----
if (require("tidygraph", quietly = TRUE) &&
  require("ggraph", quietly = TRUE)) {
  # Prepare graph
  nodes <- data.frame(name = c("Dom", "Mattan", "Daniel", "Brenton"))
  edges <- data.frame(
    from = c(1, 1, 1, 2, 3, 3, 4, 4, 4),
    to = c(2, 3, 4, 1, 1, 2, 1, 2, 3)
  )
  data <- tidygraph::tbl_graph(nodes = nodes, edges = edges)

  ggraph(data, layout = "kk") +
    geom_from_list(list(geom = "ggraph::geom_edge_arc")) +
    geom_from_list(list(geom = "ggraph::geom_node_point", size = 10)) +
    geom_from_list(list(geom = "ggraph::geom_node_label", aes = list(label = "name")))
}

```

geom_point2*Better looking points***Description**

Somewhat nicer points (especially in case of transparency) without outline strokes (borders, contours) by default.

Usage

```

geom_point2(..., stroke = 0, shape = 16)

geom_jitter2(..., size = 2, stroke = 0, shape = 16)

geom_pointrange2(..., stroke = 0)

geom_count2(..., stroke = 0)

geom_count_borderless(..., stroke = 0)

geom_point_borderless(...)

```

```
geom_jitter_borderless(...)

geom_pointrange_borderless(...)
```

Arguments

...	Other arguments to be passed to <code>ggplot2::geom_point()</code> , <code>ggplot2::geom_jitter()</code> , <code>ggplot2::geom_pointrange()</code> , or <code>ggplot2::geom_count()</code> .
stroke	Stroke thickness.
shape	Shape of points.
size	Size of points.

Note

The color aesthetics for `geom_point_borderless()` is "fill", not "color". See 'Examples'.

Examples

```
library(ggplot2)
library(see)

normal <- ggplot(iris, aes(x = Petal.Width, y = Sepal.Length)) +
  geom_point(size = 8, alpha = 0.3) +
  theme_modern()

new <- ggplot(iris, aes(x = Petal.Width, y = Sepal.Length)) +
  geom_point2(size = 8, alpha = 0.3) +
  theme_modern()

plots(normal, new, n_columns = 2)

ggplot(iris, aes(x = Petal.Width, y = Sepal.Length, fill = Species)) +
  geom_point_borderless(size = 4) +
  theme_modern()

theme_set(theme_abyss())
ggplot(iris, aes(x = Petal.Width, y = Sepal.Length, fill = Species)) +
  geom_point_borderless(size = 4)
```

Description

Points labelled with the observation name.

Usage

```
geom_poolpoint(
  label,
  size_text = 3.88,
  size_background = size_text * 2,
  size_point = size_text * 3.5,
  ...
)

geom_pooljitter(
  label,
  size_text = 3.88,
  size_background = size_text * 2,
  size_point = size_text * 3.5,
  jitter = 0.1,
  ...
)
```

Arguments

<code>label</code>	Label to add inside the points.
<code>size_text</code>	Size of text.
<code>size_background</code>	Size of the white background circle.
<code>size_point</code>	Size of the ball.
<code>...</code>	Other arguments to be passed to <code>geom_point</code> .
<code>jitter</code>	Width and height of position jitter.

Examples

```
library(ggplot2)
library(see)

ggplot(iris, aes(x = Petal.Width, y = Sepal.Length, color = Species)) +
  geom_poolpoint(label = rownames(iris)) +
  scale_color_flat_d() +
  theme_modern()

ggplot(iris, aes(x = Petal.Width, y = Sepal.Length, color = Species)) +
  geom_pooljitter(label = rownames(iris)) +
  scale_color_flat_d() +
  theme_modern()
```

geom_violindot	<i>Half-violin Half-dot plot</i>
----------------	----------------------------------

Description

Create a half-violin half-dot plot, useful for visualising the distribution and the sample size at the same time.

Usage

```
geom_violindot(  
  mapping = NULL,  
  data = NULL,  
  trim = TRUE,  
  scale = c("area", "count", "width"),  
  show.legend = NA,  
  inherit.aes = TRUE,  
  dots_size = 0.7,  
  dots_color = NULL,  
  dots_fill = NULL,  
  binwidth = 0.05,  
  position_dots = ggplot2::position_nudge(x = -0.025, y = 0),  
  ...,  
  size_dots = dots_size,  
  color_dots = dots_color,  
  fill_dots = dots_fill  
)
```

Arguments

mapping	Set of aesthetic mappings created by aes() or aes_() . If specified and <code>inherit.aes</code> = TRUE (the default), it is combined with the default mapping at the top level of the plot. You must supply <code>mapping</code> if there is no plot mapping.
data	The data to be displayed in this layer. There are three options: If <code>NULL</code> , the default, the data is inherited from the plot data as specified in the call to ggplot() . A <code>data.frame</code> , or other object, will override the plot data. All objects will be fortified to produce a data frame. See fortify() for which variables will be created. A function will be called with a single argument, the plot data. The return value must be a <code>data.frame</code> , and will be used as the layer data. A function can be created from a formula (e.g. <code>~ head(.x, 10)</code>).
trim	If TRUE (default), trim the tails of the violins to the range of the data. If FALSE, don't trim the tails.

scale	if "area" (default), all violins have the same area (before trimming the tails). If "count", areas are scaled proportionally to the number of observations. If "width", all violins have the same maximum width.
show.legend	logical. Should this layer be included in the legends? NA, the default, includes if any aesthetics are mapped. FALSE never includes, and TRUE always includes. It can also be a named logical vector to finely select the aesthetics to display.
inherit.aes	If FALSE, overrides the default aesthetics, rather than combining with them. This is most useful for helper functions that define both data and aesthetics and shouldn't inherit behaviour from the default plot specification, e.g. <code>borders()</code> .
binwidth	When method is "dotdensity", this specifies maximum bin width. When method is "histodot", this specifies bin width. Defaults to 1/30 of the range of the data
position_dots	Position adjustment for dots, either as a string, or the result of a call to a position adjustment function.
...	Other arguments passed on to <code>layer()</code> . These are often aesthetics, used to set an aesthetic to a fixed value, like <code>colour = "red"</code> or <code>size = 3</code> . They may also be parameters to the paired geom/stat.
size_dots, dots_size	Size adjustment for dots.
color_dots, dots_color	Color adjustment for dots.
fill_dots, dots_fill	Fill adjustment for dots.

Examples

```
library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violindot() +
  theme_modern()
```

geom_violinhalf *Half-violin plot*

Description

Create a half-violin plot.

Usage

```
geom_violinhalf(
  mapping = NULL,
  data = NULL,
  stat = "ydensity",
```

```

  position = "dodge",
  trim = TRUE,
  flip = FALSE,
  scale = c("area", "count", "width"),
  show.legend = NA,
  inherit.aes = TRUE,
  ...
)

```

Arguments

<code>mapping</code>	Set of aesthetic mappings created by <code>aes()</code> or <code>aes_()</code> . If specified and <code>inherit.aes</code> = TRUE (the default), it is combined with the default mapping at the top level of the plot. You must supply <code>mapping</code> if there is no plot mapping.
<code>data</code>	The data to be displayed in this layer. There are three options: If <code>NULL</code> , the default, the data is inherited from the plot data as specified in the call to <code>ggplot()</code> . A <code>data.frame</code> , or other object, will override the plot data. All objects will be fortified to produce a data frame. See <code>fortify()</code> for which variables will be created. A function will be called with a single argument, the plot data. The return value must be a <code>data.frame</code> , and will be used as the layer data. A function can be created from a <code>formula</code> (e.g. <code>~ head(.x, 10)</code>).
<code>stat</code>	The statistical transformation to use on the data for this layer, as a string.
<code>position</code>	Position adjustment, either as a string, or the result of a call to a position adjustment function.
<code>trim</code>	If TRUE (default), trim the tails of the violins to the range of the data. If FALSE, don't trim the tails.
<code>flip</code>	Should the half-violin plot switch directions? By default, this is FALSE and all half-violin geoms will have the flat-side on facing leftward. If <code>flip</code> = TRUE, then all flat-sides will face rightward. Optionally, a numeric vector can be supplied indicating which specific geoms should be flipped. See examples for more details.
<code>scale</code>	if "area" (default), all violins have the same area (before trimming the tails). If "count", areas are scaled proportionally to the number of observations. If "width", all violins have the same maximum width.
<code>show.legend</code>	logical. Should this layer be included in the legends? NA, the default, includes if any aesthetics are mapped. FALSE never includes, and TRUE always includes. It can also be a named logical vector to finely select the aesthetics to display.
<code>inherit.aes</code>	If FALSE, overrides the default aesthetics, rather than combining with them. This is most useful for helper functions that define both data and aesthetics and shouldn't inherit behaviour from the default plot specification, e.g. <code>borders()</code> .
<code>...</code>	Other arguments passed on to <code>layer()</code> . These are often aesthetics, used to set an aesthetic to a fixed value, like <code>colour = "red"</code> or <code>size = 3</code> . They may also be parameters to the paired geom/stat.

Examples

```
library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violinhalf() +
  theme_modern() +
  scale_fill_material_d()

# To flip all half-violin geoms, use `flip = TRUE`:
ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violinhalf(flip = TRUE) +
  theme_modern() +
  scale_fill_material_d()

# To flip the half-violin geoms for the first and third groups only
# by passing a numeric vector
ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violinhalf(flip = c(1, 3)) +
  theme_modern() +
  scale_fill_material_d()
```

`golden_ratio`

Golden Ratio

Description

Returns the golden ratio (1.618034...). Useful to easily obtain golden proportions, for instance for a horizontal figure, if you want its height to be 8, you can set its width to be `golden_ratio(8)`.

Usage

```
golden_ratio(x = 1)
```

Arguments

- | | |
|----------------|--|
| <code>x</code> | A number to be multiplied by the golden ratio. The default (<code>x = 1</code>) returns the value of the golden ratio. |
|----------------|--|

Examples

```
golden_ratio()
golden_ratio(10)
```

material_colors	<i>Extract material design colors as hex codes</i>
-----------------	--

Description

Can be used to get the hex code of specific colors from the material design color palette. Use `material_colors()` to see all available colors.

Usage

```
material_colors(...)
```

Arguments

... Character names of colors.

Value

A character vector with color-codes.

Examples

```
material_colors()  
material_colors("indigo", "lime")
```

metro_colors	<i>Extract Metro colors as hex codes</i>
--------------	--

Description

Can be used to get the hex code of specific colors from the Metro color palette. Use `metro_colors()` to see all available colors.

Usage

```
metro_colors(...)
```

Arguments

... Character names of colors.

Value

A character vector with color-codes.

Examples

```
metro_colors()  
metro_colors("dark red", "teal")
```

okabeito_colors *Extract Okabe-Ito colors as hex codes*

Description

Can be used to get the hex code of specific colors from the Okabe-Ito palette. Use `okabeito_colors()` to see all available colors.

Usage

```
okabeito_colors(..., original_names = FALSE, black_first = FALSE)  
oi_colors(..., original_names = FALSE, black_first = FALSE)
```

Arguments

- ... Character names of colors.
- `original_names` Logical. Should the colors be named using the original names used by Okabe and Ito (2008), such as "vermillion" (TRUE), or simplified names, such as "red" (FALSE, default)? Only used if no colors are specified (to see all available colors).
- `black_first` Logical. Should black be first (TRUE) or last (FALSE, default) in the color palette? Only used if no colors are specified (to see all available colors).

Value

A character vector with color-codes.

Examples

```
okabeito_colors()  
okabeito_colors(c("red", "light blue", "orange"))  
okabeito_colors(original_names = TRUE)  
okabeito_colors(black_first = TRUE)
```

palette_bluebrown *Blue-brown design color palette*

Description

The palette based on blue-brown colors.

Usage

```
palette_bluebrown(palette = "contrast", reverse = FALSE, ...)
```

Arguments

palette	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
reverse	Boolean indicating whether the palette should be reversed.
...	Additional arguments to pass to colorRampPalette() .

Details

This function is usually not called directly, but from within [scale_color_bluebrown\(\)](#).

palette_flat *Flat UI color palette*

Description

The palette based on **Flat UI**.

Usage

```
palette_flat(palette = "contrast", reverse = FALSE, ...)
```

Arguments

palette	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
reverse	Boolean indicating whether the palette should be reversed.
...	Additional arguments to pass to colorRampPalette() .

Details

This function is usually not called directly, but from within [scale_color_flat\(\)](#).

`palette_material` *Material design color palette*

Description

The palette based on [material design colors](#).

Usage

```
palette_material(palette = "contrast", reverse = FALSE, ...)
```

Arguments

<code>palette</code>	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
<code>reverse</code>	Boolean indicating whether the palette should be reversed.
...	Additional arguments to pass to colorRampPalette() .

Details

This function is usually not called directly, but from within [scale_color_material\(\)](#).

`palette_metro` *Metro color palette*

Description

The palette based on [Metro colors](#).

Usage

```
palette_metro(palette = "complement", reverse = FALSE, ...)
```

Arguments

<code>palette</code>	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
<code>reverse</code>	Boolean indicating whether the palette should be reversed.
...	Additional arguments to pass to colorRampPalette() .

Details

This function is usually not called directly, but from within [scale_color_metro\(\)](#).

palette_okabeito	<i>Okabe-Ito color palette</i>
------------------	--------------------------------

Description

The palette based proposed by Okabe and Ito (2008).

Usage

```
palette_okabeito(palette = "full", reverse = FALSE, order = 1:9, ...)
```

```
palette_oi(palette = "full", reverse = FALSE, order = 1:9, ...)
```

Arguments

palette	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
reverse	Boolean indicating whether the palette should be reversed.
order	A vector of numbers from 1 to 9 indicating the order of colors to use (default: 1:9)
...	Additional arguments to pass to colorRampPalette() .

Details

This function is usually not called directly, but from within [scale_color_material\(\)](#).

References

Okabe, M., & Ito, K. (2008). Color universal design (CUD): How to make figures and presentations that are friendly to colorblind people. <https://jfly.uni-koeln.de/color/#pallet> (Original work published 2002)

palette_pizza	<i>Pizza color palette</i>
---------------	----------------------------

Description

The palette based on authentic neapolitan pizzas.

Usage

```
palette_pizza(palette = "margherita", reverse = FALSE, ...)
```

Arguments

<code>palette</code>	Pizza type. Can be "margherita" (default), "margherita_crust", "diavola" or "diavola_crust".
<code>reverse</code>	Boolean indicating whether the palette should be reversed.
...	Additional arguments to pass to colorRampPalette() .

Details

This function is usually not called directly, but from within [scale_color_pizza\(\)](#).

<code>palette_see</code>	<i>See design color palette</i>
--------------------------	---------------------------------

Description

See design color palette

Usage

```
palette_see(palette = "contrast", reverse = FALSE, ...)
```

Arguments

<code>palette</code>	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
<code>reverse</code>	Boolean indicating whether the palette should be reversed.
...	Additional arguments to pass to colorRampPalette() .

Details

This function is usually not called directly, but from within [scale_color_see\(\)](#).

<code>palette_social</code>	<i>Social color palette</i>
-----------------------------	-----------------------------

Description

The palette based [Social colors](#).

Usage

```
palette_social(palette = "complement", reverse = FALSE, ...)
```

Arguments

palette	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
reverse	Boolean indicating whether the palette should be reversed.
...	Additional arguments to pass to colorRampPalette() .

Details

This function is usually not called directly, but from within [scale_color_social\(\)](#).

pizza_colors*Extract pizza colors as hex codes***Description**

Extract pizza colors as hex codes

Usage

```
pizza_colors(...)
```

Arguments

...	Character names of pizza ingredients.
-----	---------------------------------------

Value

A character vector with color-codes.

plot.see_bayesfactor_models*Plot method for Bayes Factors for model comparison***Description**

The `plot()` method for the `bayestestR::bayesfactor_models()` function. These plots visualize the **posterior probabilities** of the compared models.

Usage

```
## S3 method for class 'see_bayesfactor_models'
plot(
  x,
  n_pies = c("one", "many"),
  value = c("none", "BF", "probability"),
  sort = FALSE,
  log = FALSE,
  prior_odds = NULL,
  ...
)
```

Arguments

x	An object.
n_pies	Number of pies.
value	What value to display.
sort	The behavior of this argument depends on the plotting contexts. <ul style="list-style-type: none"> • <i>Plotting model parameters</i>: If NULL, coefficients are plotted in the order as they appear in the summary. Setting sort = "ascending" or sort = "descending" sorts coefficients in ascending or descending order, respectively. Setting sort = TRUE is the same as sort = "ascending". • <i>Plotting Bayes factors</i>: Sort pie-slices by posterior probability (descending)?
log	Logical that decides whether to display log-transformed Bayes factors.
prior_odds	An optional vector of prior odds for the models. See <code>BayesFactor::priorOdds</code> . As the size of the pizza slices corresponds to posterior probability (which is a function of prior probability and the Bayes Factor), custom prior_odds will change the slices' size.
...	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(bayestestR)
library(see)

lm0 <- lm(qsec ~ 1, data = mtcars)
lm1 <- lm(qsec ~ drat, data = mtcars)
lm2 <- lm(qsec ~ wt, data = mtcars)
lm3 <- lm(qsec ~ drat + wt, data = mtcars)

result <- bayesfactor_models(lm1, lm2, lm3, denominator = lm0)
```

```
plot(result, n_pies = "one", value = "probability", sort = TRUE) +
  scale_fill_pizza(reverse = TRUE)

plot(result, n_pies = "many", value = "BF", log = TRUE) +
  scale_fill_pizza(reverse = FALSE)
```

plot.see_bayesfactor_parameters*Plot method for Bayes Factors for a single parameter***Description**

The `plot()` method for the `bayestestR::bayesfactor_parameters()` function.

Usage

```
## S3 method for class 'see_bayesfactor_parameters'
plot(
  x,
  size_point = 2,
  rope_color = "#0171D3",
  rope_alpha = 0.2,
  show_intercept = FALSE,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>size_point</code>	Numeric specifying size of point-geoms.
<code>rope_color</code>	Character specifying color of ROPE ribbon.
<code>rope_alpha</code>	Numeric specifying transparency level of ROPE ribbon.
<code>show_intercept</code>	Logical, if <code>TRUE</code> , the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

`plot.see_check_collinearity`

Plot method for multicollinearity checks

Description

The `plot()` method for the `performance::check_collinearity()` function.

Usage

```
## S3 method for class 'see_check_collinearity'
plot(
  x,
  data = NULL,
  colors = c("#3aaaf85", "#1b6ca8", "#cd201f"),
  size_point = 4,
  size_line = 0.8,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>data</code>	The original data used to create this object. Can be a statistical model.
<code>colors</code>	Character vector of length two, indicating the colors (in hex-format) for points and line.
<code>size_point</code>	Numeric specifying size of point-geoms.
<code>size_line</code>	Numeric value specifying size of line geoms.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(performance)
m <- lm(mpg ~ wt + cyl + gear + disp, data = mtcars)
result <- check_collinearity(m)
result
plot(result)
```

`plot.see_check_distribution`

Plot method for classifying the distribution of a model-family

Description

The `plot()` method for the `performance::check_distribution()` function.

Usage

```
## S3 method for class 'see_check_distribution'
plot(x, size_point = 2, panel = TRUE, ...)
```

Arguments

<code>x</code>	An object.
<code>size_point</code>	Numeric specifying size of point-geoms.
<code>panel</code>	Logical, if <code>TRUE</code> , plots are arranged as panels; else, single plots are returned.
<code>...</code>	Arguments passed to or from other methods.

Value

A `ggplot2`-object.

Examples

```
if (require("randomForest") && require("performance")) {
  m <- lm(mpg ~ wt + cyl + gear + disp, data = mtcars)
  result <- check_distribution(m)
  result
  plot(result)
}
```

`plot.see_check_heteroscedasticity`

Plot method for (non-)constant error variance checks

Description

The `plot()` method for the `performance::check_heteroscedasticity()` function.

Usage

```
## S3 method for class 'see_check_heteroscedasticity'
plot(x, data = NULL, ...)
```

Arguments

- x An object.
- data The original data used to create this object. Can be a statistical model.
- ... Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(performance)
m <- lm(mpg ~ wt + cyl + gear + disp, data = mtcars)
result <- check_heteroscedasticity(m)
result
plot(result, data = m) # data required for pkgdown
```

plot.see_check_homogeneity

Plot method for homogeneity of variances checks

Description

The plot() method for the performance::check_homogeneity() function.

Usage

```
## S3 method for class 'see_check_homogeneity'
plot(x, data = NULL, ...)
```

Arguments

- x An object.
- data The original data used to create this object. Can be a statistical model.
- ... Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(performance)
model <- lm(len ~ supp + dose, data = ToothGrowth)
result <- check_homogeneity(model)
result
plot(result)
```

plot.see_check_normality

Plot method for check model for (non-)normality of residuals

Description

The plot() method for the performance::check_normality() function.

Usage

```
## S3 method for class 'see_check_normality'
plot(
  x,
  type = c("density", "qq", "pp"),
  data = NULL,
  size_line = 0.8,
  size_point = 2,
  alpha = 0.2,
  dot_alpha = 0.8,
  colors = c("#3aaaf85", "#1b6ca8"),
  detrend = FALSE,
  ...
)
```

Arguments

x	An object.
type	Character vector, indicating the type of plot.
data	The original data used to create this object. Can be a statistical model.
size_line	Numeric value specifying size of line geoms.
size_point	Numeric specifying size of point-geoms.
alpha	Numeric value specifying alpha level of the confidence bands.
dot_alpha	Numeric value specifying alpha level of the point geoms.
colors	Character vector of length two, indicating the colors (in hex-format) for points and line.
detrend	Logical that decides if the plot should be detrended.
...	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(performance)
m <- lm(mpg ~ wt + cyl + gear + disp, data = mtcars)
result <- check_normality(m)
plot(result)
```

plot.see_check_outliers

Plot method for checking outliers

Description

The `plot()` method for the `performance::check_outliers()` function.

Usage

```
## S3 method for class 'see_check_outliers'
plot(
  x,
  size_text = 3.5,
  size_line = 0.8,
  dot_alpha = 0.8,
  colors = c("#3aaaf85", "#1b6ca8", "#cd201f"),
  rescale_distance = TRUE,
  type = c("dots", "bars"),
  show_labels = TRUE,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>size_text</code>	Numeric value specifying size of text labels.
<code>size_line</code>	Numeric value specifying size of line geoms.
<code>dot_alpha</code>	Numeric value specifying alpha level of the point geoms.
<code>colors</code>	Character vector of length two, indicating the colors (in hex-format) for points and line.
<code>rescale_distance</code>	Logical. If TRUE, distance values are rescaled to a range from 0 to 1. This is mainly due to better catch the differences between distance values.
<code>type</code>	Character vector, indicating the type of plot.
<code>show_labels</code>	Logical. If TRUE, text labels are displayed.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(performance)
data(mtcars)
mt1 <- mtcars[, c(1, 3, 4)]
mt2 <- rbind(
  mt1,
  data.frame(mpg = c(37, 40), disp = c(300, 400), hp = c(110, 120)))
model <- lm(disp ~ mpg + hp, data = mt2)
plot(check_outliers(model))
```

plot.see_compare_parameters

Plot method for comparison of model parameters

Description

The plot() method for the parameters::compare_parameters() function.

Usage

```
## S3 method for class 'see_compare_parameters'
plot(
  x,
  show_intercept = FALSE,
  size_point = 0.8,
  size_text = NA,
  dodge_position = 0.8,
  sort = NULL,
  n_columns = NULL,
  show_labels = FALSE,
  ...
)
```

Arguments

- x An object.
- show_intercept Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
- size_point Numeric specifying size of point-geoms.
- size_text Numeric value specifying size of text labels.

<code>dodge_position</code>	Numeric value specifying the amount of "dodging" (spacing) between geoms.
<code>sort</code>	The behavior of this argument depends on the plotting contexts. <ul style="list-style-type: none"> • <i>Plotting model parameters</i>: If NULL, coefficients are plotted in the order as they appear in the summary. Setting <code>sort = "ascending"</code> or <code>sort = "descending"</code> sorts coefficients in ascending or descending order, respectively. Setting <code>sort = TRUE</code> is the same as <code>sort = "ascending"</code>. • <i>Plotting Bayes factors</i>: Sort pie-slices by posterior probability (descending)?
<code>n_columns</code>	For models with multiple components (like fixed and random, count and zero-inflated), defines the number of columns for the panel-layout. If NULL, a single, integrated plot is shown.
<code>show_labels</code>	Logical. If TRUE, text labels are displayed.
...	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("insight") &&
    require("parameters") &&
    packageVersion("insight") >= "0.13.0") {
  data(iris)
  lm1 <- lm(Sepal.Length ~ Species, data = iris)
  lm2 <- lm(Sepal.Length ~ Species + Petal.Length, data = iris)
  lm3 <- lm(Sepal.Length ~ Species * Petal.Length, data = iris)
  result <- compare_parameters(lm1, lm2, lm3)
  plot(result)
}
```

`plot.see_compare_performance`
Plot method for comparing model performances

Description

The `plot()` method for the `performance::compare_performance()` function.

Usage

```
## S3 method for class 'see_compare_performance'
plot(x, size_line = 1, ...)
```

Arguments

- x An object.
- size_line Numeric value specifying size of line geoms.
- ... Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(performance)
data(iris)
lm1 <- lm(Sepal.Length ~ Species, data = iris)
lm2 <- lm(Sepal.Length ~ Species + Petal.Length, data = iris)
lm3 <- lm(Sepal.Length ~ Species * Petal.Length, data = iris)
result <- compare_performance(lm1, lm2, lm3)
result
plot(result)
```

plot.see_effectsize_table

Plot method for effect size tables

Description

The `plot()` method for the `effectsize::effectsize()` function.

Usage

```
## S3 method for class 'see_effectsize_table'
plot(x, ...)
```

Arguments

- x An object.
- ... Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(effectsize)
m <- aov(mpg ~ factor(am) * factor(cyl), data = mtcars)
result <- eta_squared(m)
plot(result)
```

plot.see_equivalence_test_effectsize
Plot method for (conditional) equivalence testing

Description

The `plot()` method for the `bayestestR::equivalence_test()` function.

Usage

```
## S3 method for class 'see_equivalence_test_effectsize'
plot(x, ...)

## S3 method for class 'see_equivalence_test'
plot(
  x,
  rope_color = "#0171D3",
  rope_alpha = 0.2,
  show_intercept = FALSE,
  n_columns = 1,
  ...
)

## S3 method for class 'see_equivalence_test_lm'
plot(
  x,
  size_point = 0.7,
  rope_color = "#0171D3",
  rope_alpha = 0.2,
  show_intercept = FALSE,
  n_columns = 1,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>...</code>	Arguments passed to or from other methods.
<code>rope_color</code>	Character specifying color of ROPE ribbon.
<code>rope_alpha</code>	Numeric specifying transparency level of ROPE ribbon.
<code>show_intercept</code>	Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.

n_columns	For models with multiple components (like fixed and random, count and zero-inflated), defines the number of columns for the panel-layout. If NULL, a single, integrated plot is shown.
size_point	Numeric specifying size of point-geoms.

Value

A ggplot2-object.

Examples

```
library(effectsize)
m <- aov(mpg ~ factor(am) * factor(cyl), data = mtcars)
result <- eta_squared(m)
plot(result)
```

plot.see_estimate_contrasts

Plot method for estimating contrasts

Description

The `plot()` method for the `modelbased::estimate_contrasts()` function.

Usage

```
## S3 method for class 'see_estimate_contrasts'
plot(x, data = NULL, ...)
```

Arguments

x	An object.
data	The original data used to create this object. Can be a statistical model.
...	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("modelbased") && require("rstanarm")) {
  model <- stan_glm(Sepal.Width ~ Species, data = iris, refresh = 0)
  contrasts <- estimate_contrasts(model)
  means <- estimate_means(model)
  plot(contrasts, means)
}
```

plot.see_estimate_density*Plot method for density estimation of posterior samples*

Description

The `plot()` method for the `bayestestR::estimate_density()` function.

Usage

```
## S3 method for class 'see_estimate_density'
plot(
  x,
  stack = TRUE,
  show_intercept = FALSE,
  n_columns = 1,
  priors = FALSE,
  priors_alpha = 0.4,
  posteriors_alpha = 0.7,
  size_line = 0.9,
  size_point = 2,
  centrality = "median",
  ci = 0.95,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>stack</code>	Logical. If TRUE, densities are plotted as stacked lines. Else, densities are plotted for each parameter among each other.
<code>show_intercept</code>	Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
<code>n_columns</code>	For models with multiple components (like fixed and random, count and zero-inflated), defines the number of columns for the panel-layout. If NULL, a single, integrated plot is shown.
<code>priors</code>	Logical. If TRUE, prior distributions are simulated (using <code>bayestestR::simulate_prior()</code>) and added to the plot.
<code>priors_alpha</code>	Numeric value specifying alpha for the prior distributions.
<code>posteriors_alpha</code>	Numeric value specifying alpha for the posterior distributions.
<code>size_line</code>	Numeric value specifying size of line geoms.
<code>size_point</code>	Numeric specifying size of point-geoms.

centrality	Character specifying the point-estimate (centrality index) to compute. Can be "median", "mean" or "MAP".
ci	Numeric value of probability of the CI (between 0 and 1) to be estimated. Default to .95.
...	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("bayestestR") && require("rstanarm")) {
  set.seed(123)
  m <- stan_glm(Sepal.Length ~ Petal.Width * Species, data = iris, refresh = 0)
  result <- estimate_density(m)
  plot(result)
}
```

plot.see_hdi

Plot method for uncertainty or credible intervals

Description

The `plot()` method for the `bayestestR::hdi()` and related function.

Usage

```
## S3 method for class 'see_hdi'
plot(
  x,
  data = NULL,
  show_intercept = FALSE,
  show_zero = TRUE,
  show_title = TRUE,
  n_columns = 1,
  ...
)
```

Arguments

x	An object.
data	The original data used to create this object. Can be a statistical model.

<code>show_intercept</code>	Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
<code>show_zero</code>	Logical. If TRUE, will add a vertical (dotted) line at 0.
<code>show_title</code>	Logical. If TRUE, will show the title of the plot.
<code>n_columns</code>	For models with multiple components (like fixed and random, count and zero-inflated), defines the number of columns for the panel-layout. If NULL, a single, integrated plot is shown.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("bayestestR") && require("rstanarm")) {
  set.seed(123)
  m <- stan_glm(Sepal.Length ~ Petal.Width * Species, data = iris, refresh = 0)
  result <- hdi(m)
  result
  plot(result)
}
```

`plot.see_n_factors` *Plot method for numbers of clusters to extract or factors to retain*

Description

The `plot()` method for the `parameters::n_factors()` and `parameters::n_clusters()`

Usage

```
## S3 method for class 'see_n_factors'
plot(x, data = NULL, type = c("bar", "line", "area"), size = 1, ...)
```

Arguments

<code>x</code>	An object.
<code>data</code>	The original data used to create this object. Can be a statistical model.
<code>type</code>	Character vector, indicating the type of plot.
<code>size</code>	Depending on <code>type</code> , a numeric value specifying size of bars, lines, or segments.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("parameters") && require("nFactors")) {
  data(mtcars)
  result <- n_factors(mtcars, type = "PCA")
  result
  plot(result, type = "line")
}
```

plot.see_parameters_brms_meta

Plot method for Model Parameters from Bayesian Meta-Analysis

Description

The `plot()` method for the `parameters::model_parameters()` function when used with brms-meta-analysis models.

Usage

```
## S3 method for class 'see_parameters_brms_meta'
plot(
  x,
  size_point = 2,
  size_line = 0.8,
  size_text = 3.5,
  posteriors_alpha = 0.7,
  rope_alpha = 0.15,
  rope_color = "cadetblue",
  normalize_height = TRUE,
  show_labels = TRUE,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>size_point</code>	Numeric specifying size of point-geoms.
<code>size_line</code>	Numeric value specifying size of line geoms.
<code>size_text</code>	Numeric value specifying size of text labels.
<code>posteriors_alpha</code>	Numeric value specifying alpha for the posterior distributions.
<code>rope_alpha</code>	Numeric specifying transparency level of ROPE ribbon.

<code>rope_color</code>	Character specifying color of ROPE ribbon.
<code>normalize_height</code>	Logical. If TRUE, height of mcmc-areas is "normalized", to avoid overlap. In certain cases when the range of a posterior distribution is narrow for some parameters, this may result in very flat mcmc-areas. In such cases, set <code>normalize_height</code> = FALSE.
<code>show_labels</code>	Logical. If TRUE, text labels are displayed.
<code>...</code>	Arguments passed to or from other methods.

Details

Colors of density areas and errorbars: To change the colors of the density areas, use `scale_fill_manual()` with named color-values, e.g. `scale_fill_manual(values = c("Study" = "blue", "Overall" = "green"))`. To change the color of the error bars, use `scale_color_manual(values = c("Errorbar" = "red"))`.

Show or hide estimates and CI: Use `show_labels` = FALSE to hide the textual output of estimates and credible intervals.

Value

A ggplot2-object.

Examples

```
## Not run:
if (require("bayestestR") && require("brms") && require("metafor")) {
  +
  # data
  data(dat.bcg)
  dat <- escalc(
    measure = "RR",
    ai = tpos,
    bi = tneg,
    ci = cpos,
    di = cneg,
    data = dat.bcg
  )
  dat$author <- make.unique(dat$author)

  # model
  set.seed(123)
  priors <- c(
    prior(normal(0, 1), class = Intercept),
    prior(cauchy(0, 0.5), class = sd)
  )
  model <- brm(yi | se(vi) ~ 1 + (1 | author), data = dat)

  # result
  mp <- model_parameters(model)
  plot(mp)
```

```

}

## End(Not run)

```

plot.see_parameters_distribution*Plot method for describing distributions of vectors***Description**

The `plot()` method for the `parameters::describe_distribution()` function.

Usage

```

## S3 method for class 'see_parameters_distribution'
plot(
  x,
  dispersion = FALSE,
  dispersion_alpha = 0.3,
  dispersion_color = "#3498db",
  dispersion_style = c("ribbon", "curve"),
  size_bar = 0.7,
  highlight = NULL,
  highlight_color = NULL,
  ...
)

```

Arguments

<code>x</code>	An object.
<code>dispersion</code>	Logical. If TRUE, a range of dispersion for each variable to the plot will be added.
<code>dispersion_alpha</code>	Numeric value specifying the transparency level of dispersion ribbon.
<code>dispersion_color</code>	Character specifying the color of dispersion ribbon.
<code>dispersion_style</code>	Character describing the style of dispersion area. "ribbon" for a ribbon, "curve" for a normal-curve.
<code>size_bar</code>	Size of bar geoms.
<code>highlight</code>	A vector with names of categories in <code>x</code> that should be highlighted.
<code>highlight_color</code>	A vector of color values for highlighted categories. The remaining (non-highlighted) categories will be filled with a lighter grey.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(parameters)
set.seed(333)
x <- sample(1:100, 1000, replace = TRUE)
result <- describe_distribution(x)
result
plot(result)
```

plot.see_parameters_model

Plot method for model parameters

Description

The `plot()` method for the `parameters::model_parameters()` function.

Usage

```
## S3 method for class 'see_parameters_model'
plot(
  x,
  show_intercept = FALSE,
  size_point = 0.8,
  size_text = NA,
  sort = NULL,
  n_columns = NULL,
  type = c("forest", "funnel"),
  weight_points = TRUE,
  show_labels = FALSE,
  show_estimate = TRUE,
  show_interval = TRUE,
  show_density = FALSE,
  log_scale = FALSE,
  ...
)

## S3 method for class 'see_parameters_sem'
plot(
  x,
  data = NULL,
  component = c("regression", "correlation", "loading"),
  type = component,
  threshold_coefficient = NULL,
```

```

  threshold_p = NULL,
  ci = TRUE,
  size_point = 22,
  ...
)

```

Arguments

x	An object.
show_intercept	Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
size_point	Numeric specifying size of point-geoms.
size_text	Numeric value specifying size of text labels.
sort	The behavior of this argument depends on the plotting contexts. <ul style="list-style-type: none"> • <i>Plotting model parameters</i>: If NULL, coefficients are plotted in the order as they appear in the summary. Setting sort = "ascending" or sort = "descending" sorts coefficients in ascending or descending order, respectively. Setting sort = TRUE is the same as sort = "ascending". • <i>Plotting Bayes factors</i>: Sort pie-slices by posterior probability (descending)?
n_columns	For models with multiple components (like fixed and random, count and zero-inflated), defines the number of columns for the panel-layout. If NULL, a single, integrated plot is shown.
type	Character indicating the type of plot. Only applies for model parameters from meta-analysis objects (e.g. metafor).
weight_points	Logical. If TRUE, for meta-analysis objects, point size will be adjusted according to the study-weights.
show_labels	Logical. If TRUE, text labels are displayed.
show_estimate	Should the point estimate of each parameter be shown? (default: TRUE)
show_interval	Should the compatibility interval(s) of each parameter be shown? (default: TRUE)
show_density	Should the compatibility density (i.e., posterior, bootstrap, or confidence density) of each parameter be shown? (default: FALSE)
log_scale	Should exponentiated coefficients (e.g., odds-ratios) be plotted on a log scale? (default: FALSE)
...	Arguments passed to or from other methods.
data	The original data used to create this object. Can be a statistical model.
component	Character indicating which component of the model should be plotted.
threshold_coefficient	Numeric, threshold at which value coefficients will be displayed.
threshold_p	Numeric, threshold at which value p-values will be displayed.
ci	Logical, whether confidence intervals should be added to the plot.

Value

A ggplot2-object.

Examples

```
library(parameters)
m <- lm(mpg ~ wt + cyl + gear + disp, data = mtcars)
result <- model_parameters(m)
result
plot(result)
```

plot.see_parameters_pca

Plot method for principal component analysis

Description

The `plot()` method for the `parameters::principal_components()` function.

Usage

```
## S3 method for class 'see_parameters_pca'
plot(
  x,
  type = c("bar", "line"),
  size_text = 3.5,
  text_color = "black",
  size = 1,
  show_labels = TRUE,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>type</code>	Character vector, indicating the type of plot.
<code>size_text</code>	Numeric value specifying size of text labels.
<code>text_color</code>	Character specifying color of text labels.
<code>size</code>	Depending on <code>type</code> , a numeric value specifying size of bars, lines, or segments.
<code>show_labels</code>	Logical. If <code>TRUE</code> , text labels are displayed.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(parameters)
data(mtcars)
result <- principal_components(mtcars[, 1:7], n = "all", threshold = 0.2)
result
plot(result)
```

`plot.see_parameters_simulate`

Plot method for simulated model parameters

Description

The `plot()` method for the `parameters::simulate_parameters()` function.

Usage

```
## S3 method for class 'see_parameters_simulate'
plot(
  x,
  data = NULL,
  stack = TRUE,
  show_intercept = FALSE,
  n_columns = NULL,
  normalize_height = FALSE,
  size_line = 0.9,
  posteriors_alpha = 0.7,
  centrality = "median",
  ci = 0.95,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>data</code>	The original data used to create this object. Can be a statistical model.
<code>stack</code>	Logical. If <code>TRUE</code> , densities are plotted as stacked lines. Else, densities are plotted for each parameter among each other.
<code>show_intercept</code>	Logical, if <code>TRUE</code> , the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
<code>n_columns</code>	For models with multiple components (like fixed and random, count and zero-inflated), defines the number of columns for the panel-layout. If <code>NULL</code> , a single, integrated plot is shown.

normalize_height

Logical. If TRUE, height of density-areas is "normalized", to avoid overlap. In certain cases when the range of a distribution of simulated draws is narrow for some parameters, this may result in very flat density-areas. In such cases, set `normalize_height = FALSE`.

size_line Numeric value specifying size of line geoms.**posteriors_alpha**

Numeric value specifying alpha for the posterior distributions.

centrality

Character specifying the point-estimate (centrality index) to compute. Can be "median", "mean" or "MAP".

ci

Numeric value of probability of the CI (between 0 and 1) to be estimated. Default to .95.

...

Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(parameters)
m <- lm(mpg ~ wt + cyl + gear, data = mtcars)
result <- simulate_parameters(m)
result
plot(result)
```

plot.see_performance_roc

Plot method for ROC curves

Description

The `plot()` method for the `performance::performance_roc()` function.

Usage

```
## S3 method for class 'see_performance_roc'
plot(x, ...)
```

Arguments

x An object.

... Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
library(performance)
data(iris)
set.seed(123)
iris$y <- rbinom(nrow(iris), size = 1, .3)

folds <- sample(nrow(iris), size = nrow(iris) / 8, replace = FALSE)
test_data <- iris[folds, ]
train_data <- iris[-folds, ]

model <- glm(y ~ Sepal.Length + Sepal.Width, data = train_data, family = "binomial")
result <- performance_roc(model, new_data = test_data)
result
plot(result)
```

`plot.see_point_estimate`

Plot method for point estimates of posterior samples

Description

The `plot()` method for the `bayestestR::point_estimate()`.

Usage

```
## S3 method for class 'see_point_estimate'
plot(
  x,
  data = NULL,
  size_point = 2,
  size_text = 3.5,
  panel = TRUE,
  show_labels = TRUE,
  show_intercept = FALSE,
  priors = FALSE,
  priors_alpha = 0.4,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>data</code>	The original data used to create this object. Can be a statistical model.
<code>size_point</code>	Numeric specifying size of point-geoms.
<code>size_text</code>	Numeric value specifying size of text labels.
<code>panel</code>	Logical, if <code>TRUE</code> , plots are arranged as panels; else, single plots are returned.

<code>show_labels</code>	Logical. If TRUE, the text labels for the point estimates (i.e. "Mean", "Median" and/or "MAP") are shown. You may set <code>show_labels</code> = FALSE in case of overlapping labels, and add your own legend or footnote to the plot.
<code>show_intercept</code>	Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
<code>priors</code>	Logical. If TRUE, prior distributions are simulated (using <code>bayestestR::simulate_prior()</code>) and added to the plot.
<code>priors_alpha</code>	Numeric value specifying alpha for the prior distributions.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("bayestestR") && require("rstanarm")) {
  set.seed(123)
  m <- stan_glm(Sepal.Length ~ Petal.Width * Species, data = iris, refresh = 0)
  result <- point_estimate(m, centrality = "median")
  result
  plot(result)
}
```

`plot.see_p_direction` *Plot method for probability of direction*

Description

The `plot()` method for the `bayestestR::p_direction()` function.

Usage

```
## S3 method for class 'see_p_direction'
plot(
  x,
  data = NULL,
  show_intercept = FALSE,
  priors = FALSE,
  priors_alpha = 0.4,
  n_columns = 1,
  ...
)
```

Arguments

x	An object.
data	The original data used to create this object. Can be a statistical model.
show_intercept	Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
priors	Logical. If TRUE, prior distributions are simulated (using <code>bayestestR::simulate_prior()</code>) and added to the plot.
priors_alpha	Numeric value specifying alpha for the prior distributions.
n_columns	For models with multiple components (like fixed and random, count and zero-inflated), defines the number of columns for the panel-layout. If NULL, a single, integrated plot is shown.
...	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("bayestestR") && require("rstanarm")) {
  set.seed(123)
  m <- stan_glm(Sepal.Length ~ Petal.Width * Species, data = iris, refresh = 0)
  result <- p_direction(m)
  plot(result)
}
```

`plot.see_p_significance`

Plot method for practical significance

Description

The `plot()` method for the `bayestestR::p_significance()` function.

Usage

```
## S3 method for class 'see_p_significance'
plot(
  x,
  data = NULL,
  show_intercept = FALSE,
  priors = FALSE,
```

```
priors_alpha = 0.4,
n_columns = 1,
...
)
```

Arguments

<code>x</code>	An object.
<code>data</code>	The original data used to create this object. Can be a statistical model.
<code>show_intercept</code>	Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
<code>priors</code>	Logical. If TRUE, prior distributions are simulated (using <code>bayestestR::simulate_prior()</code>) and added to the plot.
<code>priors_alpha</code>	Numeric value specifying alpha for the prior distributions.
<code>n_columns</code>	For models with multiple components (like fixed and random, count and zero-inflated), defines the number of columns for the panel-layout. If NULL, a single, integrated plot is shown.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("bayestestR") && require("rstanarm")) {
  set.seed(123)
  m <- stan_glm(Sepal.Length ~ Petal.Width * Species, data = iris, refresh = 0)
  result <- p_significance(m)
  plot(result)
}
```

Description

The `plot()` method for the `bayestestR::rope()`.

Usage

```
## S3 method for class 'see_rope'
plot(
  x,
  data = NULL,
  rope_alpha = 0.5,
  rope_color = "cadetblue",
  show_intercept = FALSE,
  n_columns = 1,
  ...
)
```

Arguments

x	An object.
data	The original data used to create this object. Can be a statistical model.
rope_alpha	Numeric specifying transparency level of ROPE ribbon.
rope_color	Character specifying color of ROPE ribbon.
show_intercept	Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
n_columns	For models with multiple components (like fixed and random, count and zero-inflated), defines the number of columns for the panel-layout. If NULL, a single, integrated plot is shown.
...	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("bayestestR") && require("rstanarm")) {
  set.seed(123)
  m <- stan_glm(Sepal.Length ~ Petal.Width * Species, data = iris, refresh = 0)
  result <- rope(m)
  result
  plot(result)
}
```

plot.see_si	<i>Plot method for support intervals</i>
-------------	--

Description

The `plot()` method for the `bayestestR::si()`.

Usage

```
## S3 method for class 'see_si'
plot(
  x,
  si_color = "#0171D3",
  si_alpha = 0.2,
  show_intercept = FALSE,
  support_only = FALSE,
  ...
)
```

Arguments

<code>x</code>	An object.
<code>si_color</code>	Character specifying color of SI ribbon.
<code>si_alpha</code>	Numeric value specifying Transparency level of SI ribbon.
<code>show_intercept</code>	Logical, if TRUE, the intercept-parameter is included in the plot. By default, it is hidden because in many cases the intercept-parameter has a posterior distribution on a very different location, so density curves of posterior distributions for other parameters are hardly visible.
<code>support_only</code>	Logical. Decides whether to plot only the support data, or show the "raw" prior and posterior distributions? Only applies when plotting <code>bayestestR::si()</code> .
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```
if (require("bayestestR") && require("rstanarm")) {
  set.seed(123)
  m <- stan_glm(Sepal.Length ~ Petal.Width * Species, data = iris, refresh = 0)
  result <- si(m)
  result
  plot(result)
}
```

plots	<i>Multiple plots side by side</i>
-------	------------------------------------

Description

A wrapper around *patchwork* to plot multiple figures side by side on the same page. See [the *patchwork* documentation](#) for more advanced control of plot layouts.

Usage

```
plots(  
  ...,  
  n_rows = NULL,  
  n_columns = NULL,  
  guides = NULL,  
  tags = FALSE,  
  tag_prefix = NULL,  
  tag_suffix = NULL,  
  tag_sep = NULL,  
  title = NULL,  
  subtitle = NULL,  
  caption = NULL,  
  theme = NULL  
)
```

Arguments

...	Multiple ggplots or a list containing ggplot objects
n_rows	Number of rows to align plots.
n_columns	Number of columns to align plots.
guides	A string specifying how guides should be treated in the layout. 'collect' will collect shared guides across plots, removing duplicates. 'keep' will keep guides alongside their plot. 'auto' will inherit from a higher patchwork level (if any). See patchwork::plot_layout() for details.
tags	Add tags to your subfigures. Can be NULL to omit (default) or a character vector containing tags for each plot. Automatic tags can also be generated with '1' for Arabic numerals, 'A' for uppercase Latin letters, 'a' for lowercase Latin letters, 'I' for uppercase Roman numerals, and 'i' for lowercase Roman numerals. For backwards compatibility, can also be FALSE (equivalent to NULL), NA (equivalent to NULL), or TRUE (equivalent to 'A').
tag_prefix, tag_suffix	Text strings that should appear before or after the tag.
tag_sep	Text string giving the separator to use between different tag levels.
title, subtitle, caption	Text strings to use for the various plot annotations to add to the composed patchwork.

theme	A ggplot theme specification to use for the plot. Only elements related to titles, caption, and tags, as well as plot margin and background, are used.
-------	--

Examples

```
library(ggplot2)
library(see)

p1 <- ggplot(mtcars, aes(x = disp, y = mpg)) +
  geom_point()
p2 <- ggplot(mtcars, aes(x = mpg)) +
  geom_density()
p3 <- ggplot(mtcars, aes(x = factor(cyl))) +
  geom_bar() +
  scale_x_discrete("cyl")

plots(p1, p2)
plots(p1, p2, n_columns = 2, tags = "A")
plots(
  p1, p2, p3,
  n_columns = 1, tags = c("Fig. 1", "Fig. 2", "Fig. 3"),
  title = "The surprising truth about mtcars"
)
```

print.see_performance_pp_check
Plot method for posterior predictive checks

Description

The `plot()` method for the `performance::check_predictions()` function.

Usage

```
## S3 method for class 'see_performance_pp_check'
print(
  x,
  size_line = 0.5,
  line_alpha = 0.15,
  size_bar = 0.7,
  style = theme_lucid,
  colors = unname(social_colors(c("green", "blue"))),
  ...
)

## S3 method for class 'see_performance_pp_check'
plot(
  x,
  size_line = 0.5,
```

```

  line_alpha = 0.15,
  size_bar = 0.7,
  style = theme_lucid,
  colors = unname(social_colors(c("green", "blue"))),
  ...
)

```

Arguments

<code>x</code>	An object.
<code>size_line</code>	Numeric value specifying size of line geoms.
<code>line_alpha</code>	Numeric value specifying alpha of lines indicating <code>yrep</code> .
<code>size_bar</code>	Size of bar geoms.
<code>style</code>	A ggplot2-theme.
<code>colors</code>	Character vector of length two, indicating the colors (in hex-format) for points and line.
<code>...</code>	Arguments passed to or from other methods.

Value

A ggplot2-object.

Examples

```

if (require("performance")) {
  model <- lm(Sepal.Length ~ Species * Petal.Width + Petal.Length, data = iris)
  check_posterior_predictions(model)
}

```

`scale_color_bluebrown` *Blue-brown color palette*

Description

A blue-brown color palette. Use `scale_color_bluebrown_d()` for *discrete* categories and `scale_color_bluebrown_c()` for a *continuous* scale.

Usage

```

scale_color_bluebrown(
  palette = "contrast",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "color",
  ...
)

```

```
scale_color_bluebrown_d(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_color_bluebrown_c(  
  palette = "contrast",  
  discrete = FALSE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_bluebrown(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_bluebrown_c(  
  palette = "contrast",  
  discrete = FALSE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_bluebrown_d(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_fill_bluebrown(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "fill",  
  ...  
)
```

```

scale_fill_bluebrown_d(
  palette = "contrast",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

scale_fill_bluebrown_c(
  palette = "contrast",
  discrete = FALSE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

```

Arguments

palette	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
discrete	Boolean indicating whether color aesthetic is discrete or not.
reverse	Boolean indicating whether the palette should be reversed.
aesthetics	A vector of names of the aesthetics that this scale should be applied to (e.g., c('color', 'fill')).
...	Additional arguments to pass to colorRampPalette() .

Examples

```

library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_boxplot() +
  theme_modern() +
  scale_fill_bluebrown_d()

```

scale_color_flat *Flat UI color palette*

Description

The palette based on **Flat UI**. Use `scale_color_flat_d` for *discrete* categories and `scale_color_flat_c` for a *continuous* scale.

Usage

```
scale_color_flat(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_color_flat_d(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_color_flat_c(  
  palette = "contrast",  
  discrete = FALSE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_flat(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_flat_c(  
  palette = "contrast",  
  discrete = FALSE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_flat_d(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)
```

```

scale_fill_flat(
  palette = "contrast",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

scale_fill_flat_d(
  palette = "contrast",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

scale_fill_flat_c(
  palette = "contrast",
  discrete = FALSE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

```

Arguments

palette	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
discrete	Boolean indicating whether color aesthetic is discrete or not.
reverse	Boolean indicating whether the palette should be reversed.
aesthetics	A vector of names of the aesthetics that this scale should be applied to (e.g., c('color', 'fill')).
...	Additional arguments passed to discrete_scale() when discrete is TRUE or to scale_color_gradientn() when discrete is FALSE.

Examples

```

library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_boxplot() +
  theme_modern() +
  scale_fill_flat_d()

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violin() +
  theme_modern() +

```

```
scale_fill_flat_d(palette = "ice")

ggplot(iris, aes(x = Petal.Length, y = Petal.Width, color = Sepal.Length)) +
  geom_point() +
  theme_modern() +
  scale_color_flat_c(palette = "rainbow")
```

scale_color_material *Material design color palette*

Description

The palette based on [material design colors](#). Use `scale_color_material_d()` for *discrete* categories and `scale_color_material_c()` for a *continuous* scale.

Usage

```
scale_color_material(
  palette = "contrast",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "color",
  ...
)

scale_color_material_d(
  palette = "contrast",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "color",
  ...
)

scale_color_material_c(
  palette = "contrast",
  discrete = FALSE,
  reverse = FALSE,
  aesthetics = "color",
  ...
)

scale_colour_material(
  palette = "contrast",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "color",
  ...
```

```
)  
  
  scale_colour_material_c(  
    palette = "contrast",  
    discrete = FALSE,  
    reverse = FALSE,  
    aesthetics = "color",  
    ...  
  )  
  
  scale_colour_material_d(  
    palette = "contrast",  
    discrete = TRUE,  
    reverse = FALSE,  
    aesthetics = "color",  
    ...  
  )  
  
  scale_fill_material(  
    palette = "contrast",  
    discrete = TRUE,  
    reverse = FALSE,  
    aesthetics = "fill",  
    ...  
  )  
  
  scale_fill_material_d(  
    palette = "contrast",  
    discrete = TRUE,  
    reverse = FALSE,  
    aesthetics = "fill",  
    ...  
  )  
  
  scale_fill_material_c(  
    palette = "contrast",  
    discrete = FALSE,  
    reverse = FALSE,  
    aesthetics = "fill",  
    ...  
  )
```

Arguments

palette	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
discrete	Boolean indicating whether color aesthetic is discrete or not.
reverse	Boolean indicating whether the palette should be reversed.

aesthetics	A vector of names of the aesthetics that this scale should be applied to (e.g., c('color', 'fill')).
...	Additional arguments to pass to colorRampPalette() .

Examples

```
library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_boxplot() +
  theme_modern() +
  scale_fill_material_d()

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violin() +
  theme_modern() +
  scale_fill_material_d(palette = "ice")

ggplot(iris, aes(x = Petal.Length, y = Petal.Width, color = Sepal.Length)) +
  geom_point() +
  theme_modern() +
  scale_color_material_c(palette = "rainbow")
```

scale_color.metro *Metro color palette*

Description

The palette based on Metro [Metro colors](#). Use `scale_color_metro_d` for *discrete* categories and `scale_color_metro_c` for a *continuous* scale.

Usage

```
scale_color.metro(
  palette = "complement",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "color",
  ...
)

scale_color.metro_d(
  palette = "complement",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "color",
  ...
```

```
)  
  
  scale_color.metro_c(  
    palette = "complement",  
    discrete = FALSE,  
    reverse = FALSE,  
    aesthetics = "color",  
    ...  
)  
  
  scale.colour.metro(  
    palette = "complement",  
    discrete = TRUE,  
    reverse = FALSE,  
    aesthetics = "color",  
    ...  
)  
  
  scale.colour.metro_c(  
    palette = "complement",  
    discrete = FALSE,  
    reverse = FALSE,  
    aesthetics = "color",  
    ...  
)  
  
  scale.colour.metro_d(  
    palette = "complement",  
    discrete = TRUE,  
    reverse = FALSE,  
    aesthetics = "color",  
    ...  
)  
  
  scale_fill.metro(  
    palette = "complement",  
    discrete = TRUE,  
    reverse = FALSE,  
    aesthetics = "fill",  
    ...  
)  
  
  scale_fill.metro_d(  
    palette = "complement",  
    discrete = TRUE,  
    reverse = FALSE,  
    aesthetics = "fill",  
    ...  
)
```

```
)
  scale_fill_metro_c(
    palette = "complement",
    discrete = FALSE,
    reverse = FALSE,
    aesthetics = "fill",
    ...
  )
```

Arguments

palette	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
discrete	Boolean indicating whether color aesthetic is discrete or not.
reverse	Boolean indicating whether the palette should be reversed.
aesthetics	A vector of names of the aesthetics that this scale should be applied to (e.g., c('color', 'fill')).
...	Additional arguments to pass to colorRampPalette() .

Examples

```
library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_boxplot() +
  theme_modern() +
  scale_fill_metro_d()

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violin() +
  theme_modern() +
  scale_fill_metro_d(palette = "ice")

ggplot(iris, aes(x = Petal.Length, y = Petal.Width, color = Sepal.Length)) +
  geom_point() +
  theme_modern() +
  scale_color_metro_c(palette = "rainbow")
```

scale_color_okabeito Okabe-Ito color palette

Description

The Okabe-Ito color palette was proposed by Okabe and Ito (2008) as a qualitative color palette that is accessible to people with a variety of forms of color vision deficiency. In addition to being accessible, it includes 9 vivid colors that are readily nameable and include colors that correspond to major primary and secondary colors (e.g., red, yellow, blue).

Usage

```
scale_color_okabeito(
  palette = "full",
  reverse = FALSE,
  order = 1:9,
  aesthetics = "color",
  ...
)

scale_fill_okabeito(
  palette = "full",
  reverse = FALSE,
  order = 1:9,
  aesthetics = "fill",
  ...
)

scale_colour_okabeito(
  palette = "full",
  reverse = FALSE,
  order = 1:9,
  aesthetics = "color",
  ...
)

scale_fill_oi(
  palette = "full",
  reverse = FALSE,
  order = 1:9,
  aesthetics = "fill",
  ...
)
```

Arguments

<code>palette</code>	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
<code>reverse</code>	Boolean indicating whether the palette should be reversed.
<code>order</code>	A vector of numbers from 1 to 9 indicating the order of colors to use (default: 1:9)
<code>aesthetics</code>	A vector of names of the aesthetics that this scale should be applied to (e.g., c('color', 'fill')).
...	Additional arguments to pass to colorRampPalette() .

Details

The Okabe-Ito palette is included in the base R [palette.colors\(\)](#). These functions make this palette easier to use with *ggplot2*.

The Okabe-Ito palette is only available as a discrete palette. For color-accessible continuous variables, consider [the viridis palettes](#).

References

Okabe, M., & Ito, K. (2008). Color universal design (CUD): How to make figures and presentations that are friendly to colorblind people. <https://jfly.uni-koeln.de/color/#pallet> (Original work published 2002)

Examples

```
library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_boxplot() +
  theme_modern() +
  scale_fill_okabeito()

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violin() +
  theme_modern() +
  scale_fill_oi(palette = "black_first")

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violin() +
  theme_modern() +
  scale_fill_oi(order = c(1, 5, 6, 2, 4, 3, 7))
```

scale_color_pizza *Pizza color palette*

Description

The palette based on authentic neapolitan pizzas. Use `scale_color_pizza_d()` for *discrete* categories and `scale_color_pizza_c()` for a *continuous* scale.

Usage

```
scale_color_pizza(
  palette = "margherita",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "color",
  ...
)

scale_color_pizza_d(
  palette = "margherita",
```

```
discrete = TRUE,  
reverse = FALSE,  
aesthetics = "color",  
...  
)  
  
scale_color_pizza_c(  
  palette = "margherita",  
  discrete = FALSE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_pizza(  
  palette = "margherita",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_pizza_c(  
  palette = "margherita",  
  discrete = FALSE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_pizza_d(  
  palette = "margherita",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_fill_pizza(  
  palette = "margherita",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "fill",  
  ...  
)  
  
scale_fill_pizza_d(  
  palette = "margherita",
```

```

discrete = TRUE,
reverse = FALSE,
aesthetics = "fill",
...
)

scale_fill_pizza_c(
  palette = "margherita",
  discrete = FALSE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

```

Arguments

<code>palette</code>	Pizza type. Can be "margherita" (default), "margherita_crust", "diavola" or "diavola_crust".
<code>discrete</code>	Boolean indicating whether color aesthetic is discrete or not.
<code>reverse</code>	Boolean indicating whether the palette should be reversed.
<code>aesthetics</code>	A vector of names of the aesthetics that this scale should be applied to (e.g., <code>c('color', 'fill')</code>).
<code>...</code>	Additional arguments to pass to colorRampPalette() .

Examples

```

library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_boxplot() +
  theme_modern() +
  scale_fill_pizza_d()

ggplot(iris, aes(x = Petal.Length, y = Petal.Width, color = Sepal.Length)) +
  geom_point() +
  theme_modern() +
  scale_color_pizza_c()

```

`scale_color_see` *See color palette*

Description

The See color palette. Use `scale_color_see_d()` for *discrete* categories and `scale_color_see_c()` for a *continuous* scale.

Usage

```
scale_color_see(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_color_see_d(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_color_see_c(  
  palette = "contrast",  
  discrete = FALSE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_see(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_see_c(  
  palette = "contrast",  
  discrete = FALSE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_see_d(  
  palette = "contrast",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)
```

```

scale_fill_see(
  palette = "contrast",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

scale_fill_see_d(
  palette = "contrast",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

scale_fill_see_c(
  palette = "contrast",
  discrete = FALSE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

```

Arguments

palette	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
discrete	Boolean indicating whether color aesthetic is discrete or not.
reverse	Boolean indicating whether the palette should be reversed.
aesthetics	A vector of names of the aesthetics that this scale should be applied to (e.g., c('color', 'fill')).
...	Additional arguments to pass to colorRampPalette() .

Examples

```

library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_boxplot() +
  theme_modern() +
  scale_fill_see_d()

ggplot(iris, aes(x = Sepal.Length, y = Sepal.Width, colour = Species)) +
  geom_point() +
  theme_abyss() +
  scale_color_see(palette = "light")

```

```
ggplot(iris, aes(x = Petal.Length, y = Petal.Width, color = Sepal.Length)) +  
  geom_point() +  
  theme_modern() +  
  scale_color_see_c(palette = "rainbow")
```

scale_color_social *Social color palette*

Description

The palette based **Social colors**. Use `scale_color_social_d` for *discrete* categories and `scale_color_social_c` for a *continuous* scale.

Usage

```
scale_color_social(  
  palette = "complement",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_color_social_d(  
  palette = "complement",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_color_social_c(  
  palette = "complement",  
  discrete = FALSE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)  
  
scale_colour_social(  
  palette = "complement",  
  discrete = TRUE,  
  reverse = FALSE,  
  aesthetics = "color",  
  ...  
)
```

```

scale_colour_social_c(
  palette = "complement",
  discrete = FALSE,
  reverse = FALSE,
  aesthetics = "color",
  ...
)

scale_colour_social_d(
  palette = "complement",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "color",
  ...
)

scale_fill_social(
  palette = "complement",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

scale_fill_social_d(
  palette = "complement",
  discrete = TRUE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

scale_fill_social_c(
  palette = "complement",
  discrete = FALSE,
  reverse = FALSE,
  aesthetics = "fill",
  ...
)

```

Arguments

<code>palette</code>	Character name of palette. Depending on the color scale, can be "full", "ice", "rainbow", "complement", "contrast", "light" (for dark themes), or "black_first".
<code>discrete</code>	Boolean indicating whether color aesthetic is discrete or not.
<code>reverse</code>	Boolean indicating whether the palette should be reversed.

aesthetics	A vector of names of the aesthetics that this scale should be applied to (e.g., c('color', 'fill')).
...	Additional arguments to pass to colorRampPalette() .

Examples

```
library(ggplot2)
library(see)

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_boxplot() +
  theme_modern() +
  scale_fill_social_d()

ggplot(iris, aes(x = Species, y = Sepal.Length, fill = Species)) +
  geom_violin() +
  theme_modern() +
  scale_fill_social_d(palette = "ice")

ggplot(iris, aes(x = Petal.Length, y = Petal.Width, color = Sepal.Length)) +
  geom_point() +
  theme_modern() +
  scale_color_social_c(palette = "rainbow")
```

see_colors *Extract See colors as hex codes*

Description

Can be used to get the hex code of specific colors from the See color palette. Use `see_colors()` to see all available colors.

Usage

```
see_colors(...)
```

Arguments

... Character names of colors.

Value

A character vector with color-codes.

Examples

```
see_colors()

see_colors("indigo", "lime")
```

social_colors	<i>Extract Social colors as hex codes</i>
---------------	---

Description

Can be used to get the hex code of specific colors from the Social color palette. Use `social_colors()` to see all available colors.

Usage

```
social_colors(...)
```

Arguments

...	<i>Character names of colors.</i>
-----	-----------------------------------

Value

A character vector with color-codes.

Examples

```
social_colors()
social_colors("dark red", "teal")
```

theme_abyss	<i>Abyss theme</i>
-------------	--------------------

Description

A deep dark blue theme for ggplot.

Usage

```
theme_abyss(
  base_size = 11,
  base_family = "",
  plot.title.size = 15,
  plot.title.face = "plain",
  plot.title.space = 20,
  plot.title.position = "plot",
  legend.position = "right",
  axis.title.space = 20,
  legend.title.size = 13,
  legend.text.size = 12,
```

```

axis.title.size = 13,
axis.title.face = "plain",
axis.text.size = 12,
axis.text.angle = NULL,
tags.size = 15,
tags.face = "bold"
)

```

Arguments

base_size base font size, given in pts.

base_family base font family

plot.title.size Title size in pts. Can be "none".

plot.title.face Title font face ("plain", "italic", "bold", "bold.italic").

plot.title.space Title spacing.

plot.title.position Alignment of the plot title/subtitle and caption. The setting for plot.title.position applies to both the title and the subtitle. A value of "panel" (the default) means that titles and/or caption are aligned to the plot panels. A value of "plot" means that titles and/or caption are aligned to the entire plot (minus any space for margins and plot tag).

legend.position the position of legends ("none", "left", "right", "bottom", "top", or two-element numeric vector)

axis.title.space Axis title spacing.

legend.title.size Legend elements text size in pts.

legend.text.size Legend elements text size in pts. Can be "none".

axis.title.size Axis title text size in pts.

axis.title.face Axis font face ("plain", "italic", "bold", "bold.italic").

axis.text.size Axis text size in pts.

axis.text.angle Rotate the x axis labels.

tags.size Tags text size in pts.

tags.face Tags font face ("plain", "italic", "bold", "bold.italic").

Examples

```
library(ggplot2)
library(see)

ggplot(iris, aes(x = Sepal.Width, y = Sepal.Length)) +
  geom_point(color = "white") +
  theme_abyss()
```

`theme_blackboard` *Blackboard dark theme*

Description

A modern, sleek and dark theme for ggplot.

Usage

```
theme_blackboard(
  base_size = 11,
  base_family = "",
  plot.title.size = 15,
  plot.title.face = "plain",
  plot.title.space = 20,
  plot.title.position = "plot",
  legend.position = "right",
  axis.title.space = 20,
  legend.title.size = 13,
  legend.text.size = 12,
  axis.title.size = 13,
  axis.title.face = "plain",
  axis.text.size = 12,
  axis.text.angle = NULL,
  tags.size = 15,
  tags.face = "bold"
)
```

Arguments

<code>base_size</code>	base font size, given in pts.
<code>base_family</code>	base font family
<code>plot.title.size</code>	Title size in pts. Can be "none".
<code>plot.title.face</code>	Title font face ("plain", "italic", "bold", "bold.italic").
<code>plot.title.space</code>	Title spacing.

```

plot.title.position
    Alignment of the plot title/subtitle and caption. The setting for plot.title.position applies to both the title and the subtitle. A value of "panel" (the default) means that titles and/or caption are aligned to the plot panels. A value of "plot" means that titles and/or caption are aligned to the entire plot (minus any space for margins and plot tag).

legend.position
    the position of legends ("none", "left", "right", "bottom", "top", or two-element numeric vector)

axis.title.space
    Axis title spacing.

legend.title.size
    Legend elements text size in pts.

legend.text.size
    Legend elements text size in pts. Can be "none".

axis.title.size
    Axis title text size in pts.

axis.title.face
    Axis font face ("plain", "italic", "bold", "bold.italic").

axis.text.size
    Axis text size in pts.

axis.text.angle
    Rotate the x axis labels.

tags.size
    Tags text size in pts.

tags.face
    Tags font face ("plain", "italic", "bold", "bold.italic").

```

Examples

```

library(ggplot2)
library(see)

ggplot(iris, aes(x = Sepal.Width, y = Sepal.Length)) +
  geom_point(color = "white") +
  theme_blackboard()

```

theme_lucid

Lucid theme

Description

A light, clear theme for ggplot.

Usage

```
theme_lucid(
  base_size = 11,
  base_family = "",
  plot.title.size = 12,
  plot.title.face = "plain",
  plot.title.space = 15,
  plot.title.position = "plot",
  legend.position = "right",
  axis.title.space = 10,
  legend.title.size = 11,
  legend.text.size = 10,
  axis.title.size = 11,
  axis.title.face = "plain",
  axis.text.size = 10,
  axis.text.angle = NULL,
  tags.size = 11,
  tags.face = "plain"
)
```

Arguments

base_size base font size, given in pts.

base_family base font family

plot.title.size Title size in pts. Can be "none".

plot.title.face Title font face ("plain", "italic", "bold", "bold.italic").

plot.title.space Title spacing.

plot.title.position Alignment of the plot title/subtitle and caption. The setting for plot.title.position applies to both the title and the subtitle. A value of "panel" (the default) means that titles and/or caption are aligned to the plot panels. A value of "plot" means that titles and/or caption are aligned to the entire plot (minus any space for margins and plot tag).

legend.position the position of legends ("none", "left", "right", "bottom", "top", or two-element numeric vector)

axis.title.space Axis title spacing.

legend.title.size Legend elements text size in pts.

legend.text.size Legend elements text size in pts. Can be "none".

axis.title.size Axis title text size in pts.

```
axis.title.face  
          Axis font face ("plain", "italic", "bold", "bold.italic").  
axis.text.size Axis text size in pts.  
axis.text.angle  
          Rotate the x axis labels.  
tags.size      Tags text size in pts.  
tags.face      Tags font face ("plain", "italic", "bold", "bold.italic").
```

Examples

```
library(ggplot2)  
library(see)  
  
ggplot(iris, aes(x = Sepal.Width, y = Sepal.Length)) +  
  geom_point(color = "white") +  
  theme_lucid()
```

theme_modern *The easystats' minimal theme*

Description

A modern, sleek and elegant theme for ggplot.

Usage

```
theme_modern(  
  base_size = 11,  
  base_family = "",  
  plot.title.size = 15,  
  plot.title.face = "plain",  
  plot.title.space = 20,  
  plot.title.position = "plot",  
  legend.position = "right",  
  axis.title.space = 20,  
  legend.title.size = 13,  
  legend.text.size = 12,  
  axis.title.size = 13,  
  axis.title.face = "plain",  
  axis.text.size = 12,  
  axis.text.angle = NULL,  
  tags.size = 15,  
  tags.face = "bold"  
)
```

Arguments

base_size base font size, given in pts.

base_family base font family

plot.title.size Title size in pts. Can be "none".

plot.title.face Title font face ("plain", "italic", "bold", "bold.italic").

plot.title.space Title spacing.

plot.title.position Alignment of the plot title/subtitle and caption. The setting for `plot.title.position` applies to both the title and the subtitle. A value of "panel" (the default) means that titles and/or caption are aligned to the plot panels. A value of "plot" means that titles and/or caption are aligned to the entire plot (minus any space for margins and plot tag).

legend.position the position of legends ("none", "left", "right", "bottom", "top", or two-element numeric vector)

axis.title.space Axis title spacing.

legend.title.size Legend elements text size in pts.

legend.text.size Legend elements text size in pts. Can be "none".

axis.title.size Axis title text size in pts.

axis.title.face Axis font face ("plain", "italic", "bold", "bold.italic").

axis.text.size Axis text size in pts.

axis.text.angle Rotate the x axis labels.

tags.size Tags text size in pts.

tags.face Tags font face ("plain", "italic", "bold", "bold.italic").

Examples

```
library(ggplot2)
library(see)

ggplot(iris, aes(x = Sepal.Width, y = Sepal.Length, color = Species)) +
  geom_point() +
  theme_modern()
```

theme_radar *Themes for radar plots*

Description

`theme_radar()` is a light, clear theme for ggplot radar-plots, while `theme_radar_dark()` is a dark variant of `theme_radar()`.

Usage

```
theme_radar(  
  base_size = 11,  
  base_family = "",  
  plot.title.size = 12,  
  plot.title.face = "plain",  
  plot.title.space = 15,  
  plot.title.position = "plot",  
  legend.position = "right",  
  axis.title.space = 15,  
  legend.title.size = 11,  
  legend.text.size = 10,  
  axis.title.size = 11,  
  axis.title.face = "plain",  
  axis.text.size = 10,  
  axis.text.angle = NULL,  
  tags.size = 11,  
  tags.face = "plain"  
)  
  
theme_radar_dark(  
  base_size = 11,  
  base_family = "",  
  plot.title.size = 12,  
  plot.title.face = "plain",  
  plot.title.space = 15,  
  legend.position = "right",  
  axis.title.space = 15,  
  legend.title.size = 11,  
  legend.text.size = 10,  
  axis.title.size = 11,  
  axis.title.face = "plain",  
  axis.text.size = 10,  
  axis.text.angle = NULL,  
  tags.size = 11,  
  tags.face = "plain"  
)
```
