Package 'tictoc'

April 19, 2021

Title Functions for Timing R Scripts, as Well as Implementations of

Stack and List Structures
Version 1.0.1
Author Sergei Izrailev
Maintainer Sergei Izrailev <sizrailev@collective.com></sizrailev@collective.com>
Description Provides the timing functions 'tic' and 'toc' that can be nested. One can record all timings while a complex script is running, and examine the values later. It is also possible to instrument the timing calls with custom callbacks. In addition, this package provides class 'Stack', implemented as a vector, and class 'List', implemented as a list, both of which support operations 'push', 'pop', 'first', 'last' and 'clear'.

2 Stack

Stack

Stack and List classes and methods

Description

```
push - Append an element.

pop - Remove and return the last element.

clear - Remove all elements.

shift - Remove and return the first element.

first - Return the first element.

last - Return the last element.

size - Return the number of elements.

as. Stack - Creates a new Stack from (typically, vector) s.

as. List - Creates a new List from (typically, list) s.

Stack() - Creates and keeps a stack of items of the same type, implemented as an R vector. The type is determined by the first push operation.

List() - Creates and keeps a list of items, implemented as an R list. The type is determined by the first push operation.
```

Usage

```
## Default S3 method:
push(x, value)
## Default S3 method:
pop(x)
## Default S3 method:
clear(x)
## Default S3 method:
shift(x)
## Default S3 method:
first(x)
## Default S3 method:
last(x)
## Default S3 method:
size(x)
## Default S3 method:
as.Stack(s)
```

tic 3

```
## Default S3 method:
as.List(s)
Stack()
List()
```

Arguments

x A Stack or List object.value Value to append.

s A structure to be converted to a Stack or List.

tic Timing utilities.

Description

tic - Starts the timer and stores the start time and the message on the stack.

toc - Notes the current timer and computes elapsed time since the matching call to tic(). When quiet is FALSE, prints the associated message and the elapsed time.

toc.outmsg - Formats a message for pretty printing. Redefine this for different formatting.

tic.clearlog - Clears the tic/toc log.

tic.clear - Clears the tic/toc stack. This could be useful in cases when because of an error the closing toc() calls never get executed.

tic.log - Returns log messages from calls to tic/toc since the last call to tic.clearlog.

Usage

```
tic(msg = NULL, quiet = TRUE, func.tic = NULL, ...)
toc(log = FALSE, quiet = FALSE, func.toc = toc.outmsg, ...)
toc.outmsg(tic, toc, msg)
tic.clearlog()
tic.clear()
tic.log(format = TRUE)
```

4 tic

Arguments

- a text string associated with the timer. It gets printed on a call to toc() msg func.tic Function producing the formatted message with a signature f(tic,toc,msg,...). Here, parameters tic and toc are the elapsed process times in seconds, so the time elapsed between the tic() and toc() calls is computed by toc -tic. msg is the string passed to the tic() call. The other parameters that are passed to func. tic and func. toc. . . . - When TRUE, pushes the timings and the message in a list of recorded timings. log quiet When TRUE, doesn't print any messages func.toc Function producing the formatted message with a signature f(tic,toc,msg,...). Here, parameters tic and toc are the elapsed process times in seconds, so the time elapsed between the tic() and toc() calls is computed by toc -tic. msg is the string passed to the tic() call. Time from the call to tic() (proc.time()["elapsed"]) tic toc Time from the call to toc() (proc.time()["elapsed"]) format When true, tic.log returns a list of formatted toc() output, otherwise, returns the raw results.

Value

tic returns the timestamp (invisible).

toc returns an (invisible) list containing the timestamps tic, toc, and the message msg.

toc.outmsg returns formatted message.

tic.log returns a list of formatted messages (format = TRUE) or a list of lists containing the timestamps and unformatted messages from prior calls to tic/toc.

Examples

```
## Not run:
## Basic use case
tic()
print("Do something...")
Sys.sleep(1)
toc()
# 1.034 sec elapsed
## Inline timing example, similar to system.time()
tic(); for(i in 1:1000000) { j = i / 2 }; toc()
# 0.527 sec elapsed
## Timing multiple steps
```

tic 5

```
tic("step 1")
print("Do something...")
Sys.sleep(1)
toc()
# step 1: 1.005 sec elapsed
tic("step 2")
print("Do something...")
Sys.sleep(1)
toc()
# step 2: 1.004 sec elapsed
## Timing nested code
tic("outer")
   Sys.sleep(1)
   tic("middle")
      Sys.sleep(2)
      tic("inner")
         Sys.sleep(3)
      toc()
# inner: 3.004 sec elapsed
   toc()
# middle: 5.008 sec elapsed
toc()
# outer: 6.016 sec elapsed
## Timing in a loop and analyzing the results later using tic.log().
tic.clearlog()
for (x in 1:10)
{
   tic(x)
   Sys.sleep(1)
   toc(log = TRUE, quiet = TRUE)
log.txt <- tic.log(format = TRUE)</pre>
log.lst <- tic.log(format = FALSE)</pre>
tic.clearlog()
timings <- unlist(lapply(log.lst, function(x) x$toc - x$tic))</pre>
mean(timings)
# [1] 1.001
writeLines(unlist(log.txt))
# 1: 1.002 sec elapsed
# 2: 1 sec elapsed
# 3: 1.002 sec elapsed
# 4: 1.001 sec elapsed
# 5: 1.001 sec elapsed
# 6: 1.001 sec elapsed
# 7: 1.001 sec elapsed
# 8: 1.001 sec elapsed
# 9: 1.001 sec elapsed
# 10: 1 sec elapsed
```

6 tictoc

```
## Using custom callbacks in tic/toc
my.msg.tic <- function(tic, msg)</pre>
   if (is.null(msg) || is.na(msg) || length(msg) == 0)
      outmsg <- paste(round(toc - tic, 3), " seconds elapsed", sep="")</pre>
   }
   else
      outmsg <- paste("Starting ", msg, "...", sep="")</pre>
   }
}
my.msg.toc <- function(tic, toc, msg, info)</pre>
   if (is.null(msg) || is.na(msg) || length(msg) == 0)
      outmsg <- paste(round(toc - tic, 3), " seconds elapsed", sep="")</pre>
   }
   else
   {
      outmsg <- paste(info, ": ", msg, ": ",
                   round(toc - tic, 3), " seconds elapsed", sep="")
   }
}
tic("outer", quiet = FALSE, func.tic = my.msg.tic)
# Starting outer...
   Sys.sleep(1)
   tic("middle", quiet = FALSE, func.tic = my.msg.tic)
# Starting middle...
      Sys.sleep(2)
      tic("inner", quiet = FALSE, func.tic = my.msg.tic)
         Sys.sleep(3)
# Starting inner...
      toc(quiet = FALSE, func.toc = my.msg.toc, info = "INFO")
# INFO: inner: 3.005 seconds elapsed
   toc(quiet = FALSE, func.toc = my.msg.toc, info = "INFO")
# INFO: middle: 5.01 seconds elapsed
toc(quiet = FALSE, func.toc = my.msg.toc, info = "INFO")
# INFO: outer: 6.014 seconds elapsed
## End(Not run)
```

tictoc

Package tictoc.

Description

Functions for timing, as well as implementations of Stack and List structures.

tictoc 7

Details

The tictoc package provides the timing functions tic and toc that can be nested. It provides an alternative to system.time() with a different syntax similar to that in another well-known software package. tic and toc are easy to use, and are especially useful when timing several sections in more than a few lines of code.

In general, calls to tic and toc start the timer when the tic call is made and stop the timer when the toc call is made, recording the elapsed time between the calls from proc.time. The default behavior is to print a simple message with the elapsed time in the toc call.

The features include the following:

- nesting of the tic and toc calls
- suppressing the default output with quiet = TRUE
- collecting the timings in user-defined variables
- collecting the timings in a log structure provided by the package (see tic.log)
- providing a custom message for each tic call
- using custom callbacks for the tic and toc calls to redefine the default behavior and/or add other functionality (such as logging to a database)

In addition, this package provides classes Stack (implemented as a vector) and List (implemented as a list), both of which support operations push, pop, first, last, clear and size.
