Package 'woe'

July 28, 2015

Type Package			
Title Computes Weight of E	Evidence and Information Values		
Version 0.2			
Date 2015-07-07			
Author Sudarson Mothilal	Thoppay <sudarson@outlook.com></sudarson@outlook.com>		
Maintainer Sudarson Moth	ilal Thoppay <sudarson@outlook.com></sudarson@outlook.com>		
Description Shows the relationship between an independent and dependent variable through Weight of Evidence and Information Value.			
Depends R (>= $3.1.0$)			
License GPL-2			
Repository CRAN			
NeedsCompilation no	NeedsCompilation no		
Date/Publication 2015-07-28 23:41:30			
R topics document	ed:		
woe			
Index			
woe	Weigth of Evidence		
Description			
Computes the Weight of variable.	of Evidence and Information Value between Dependent and Independent	en	
Usage			
	nt, Continuous, Dependent, C_Bin, Bad, Good)		
	,,,,,,		

2 woe

Arguments

Data : Name of Data Set

Independent : Name of the Independent Variable

Continuous : True if the variable is continuous, False if variable is Ordinal or Nominal

Dependent : Name of the Targer Variable

C_Bin : Count of Bins to be computed

Bad : Which categorical variable do you want to be bad
Good : Which categorical variable do you want to be good

Details

WOE

Value

Returns a DataSet with computed WoE and IV values on success or 0 on Failure

Note

"woe" shows the log-odds ratio between between Goods and Bads. In the Bivalued Dependenet variable, one value represents Goods and others are bads. In Detail with an Example: Let Dependent variable be ATTRITED (0,1) and Independent variable be TENURE where, 1-Attrited, 0-Non Attrited. If I wish to check WOE and IV of Tenure with ATTRITED to know if Tenure has an effect in getting attrited, Then good would be 1 and bad=0. If I wish to check WOE and IV of Tenure with ATTRITED to know if Tenure has an effect in not getting attrited, Then good would be 0 and bad=1.

Author(s)

Sudarson Mothilal Thoppay

Examples

```
woe(Data=mtcars,"cyl",FALSE,"am",10,Bad=0,Good=1)
woe(Data=mtcars,"mpg",TRUE,"am",10,Bad=0,Good=1)
```
